This is what we found in our investigations:

Dark field images:

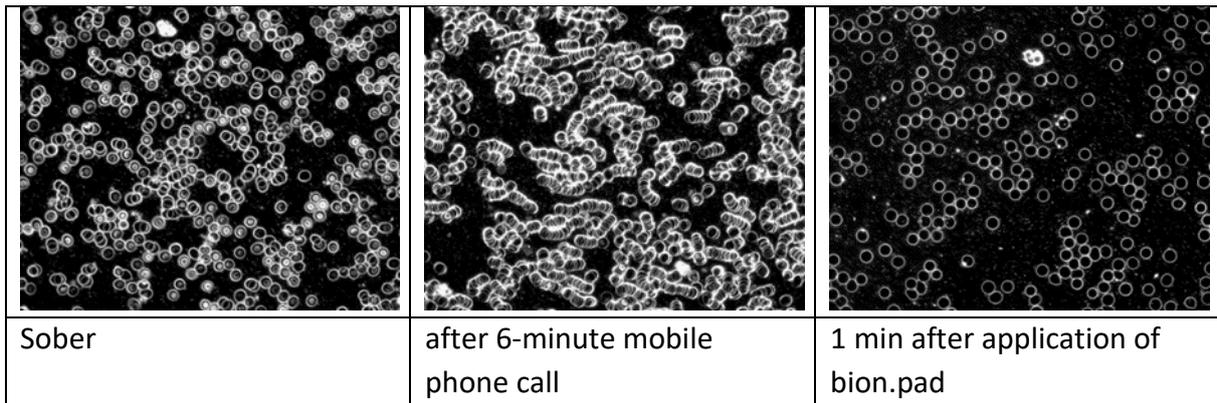

The experimental set-ups and procedures are standardised for all our investigations, see block 1. Clearly summarised:

The subject appears to be sober, with a minimum of 8 hours' restriction on food.

1. blood collection
2. blood collection after 6 minutes of irradiation by cordless phone or mobile phone
3. blood collection immediately afterwards

Sober after a 6-minute mobile phone call 1 min after application of bion.pad

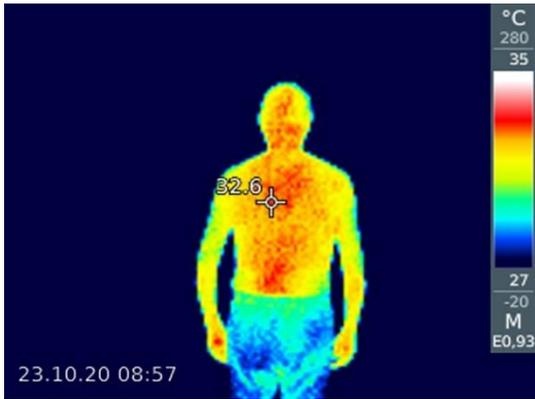

4. application of a bion-tec informed pad to any part of the body

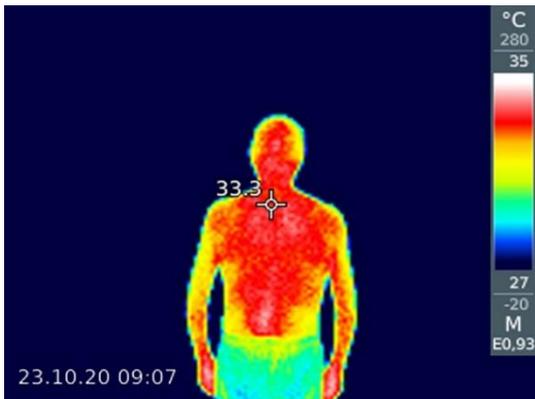

For better measurability for thermal imaging we chose the bion-pad with the dimensions 24x12 cm, which we positioned in the shoulder-neck area. The amount of quartz in this pad is approximately the same as the amount of Alpha Tauri T-shirt used for testing.

Standardised procedure for thermal images:

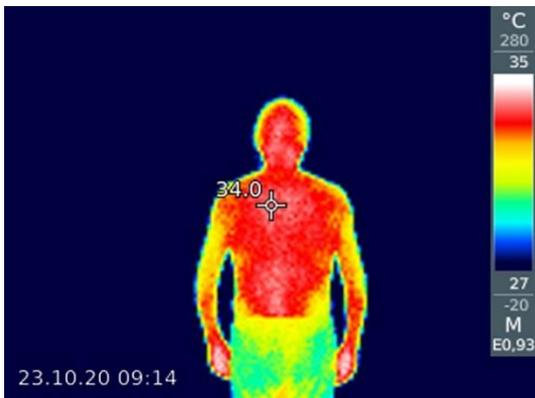

1. room temperature is kept constant at 24°C +/- 0.5°C
2. the test person is at rest in the room with bare upper body ½ hour before and during the entire measuring process, is sober for at least 8 hours and has not come into contact with bion-tec-informed mineral products for that long.

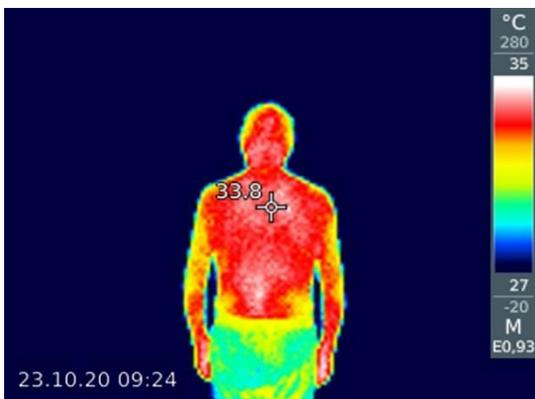

Input picture: The colour scale on the side shows the temperatures between 27°C and 35°C The skin temperature is between 29°C and 32.6°C.

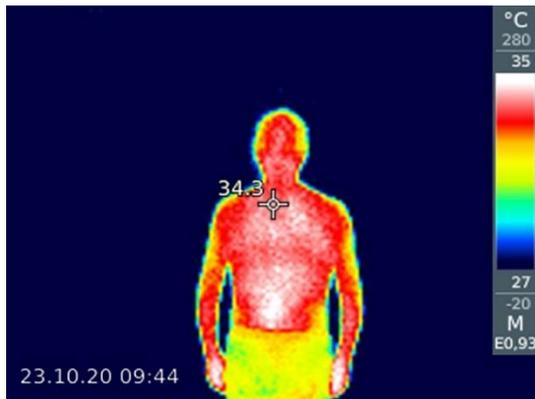

After a 6-minute phone call, the entire upper body has warmed up.

After applying the bion-pad (6 min) the warming has increased further.

10 min after removal of the bion-pad the temperature has increased even further

Within an additional half hour a further increase occurred

Discussion: The harmfulness of electromagnetic radiation is claimed in thousands of studies. For example, ultrashort overheating is repeatedly cited as the cause of the manifold damage to all cell structures.

Of course, all energies can also be converted into heat. And thus - unfortunately in ignorance of an only insufficiently known type of energy - the harmful overheating theory would be plausible.

All electromagnetic waves emit scalar waves with the same frequencies. The scalar waves cannot be measured with school physics instruments, but they are clearly existent. (For proof see block 1!).

We do not recognise any harmfulness of the electromagnetic energy (transverse waves), but with proven certainty the harmfulness of their emitted scalar waves (monopolar linear longitudinal waves).

Now all life consists of cosmic scalar waves and is maintained, determined, transformed and renewed by them. The human being lives to about 1/3 or less from food, better food, and up to about 3/4 from the cosmic scalar waves (bipolar natural logarithmic longitudinal waves). All atoms, molecules, cell organelles, cells, organs, structures, whole bodies and their aura are in energetic harmony with each other in the bipolar natural logarithmic scalar waves! However, as the monopolar scalar waves are linearly related to each other, they are not compatible with the bipolar logarithmic waves of the cosmos. Of course there are matches of both wavelengths in corresponding mathematical areas.

The radiation intensity of cosmic scalar waves is ultra weak! The radiation intensity of technical scalar waves can be stronger - depending on distance - but it is still ultra-weak. This leads to a 2nd point of attack in many studies: If the cosmic energy already warms the body and keeps it in motion down to the smallest structures, then the technical scalar waves would also have to generate heat, see confirmation between Figures 1 and 2.

They do so, but only indirectly, by forcing the harmony of all life structures to increased activity. For this purpose, the cosmic scalar waves are increased in intensity, either directly or via "long-term amplifiers" = food or foodstuffs. One should always be aware of what all matter consists of, namely compressed cosmic scalar logarithmic energy. Every atom from food is retained and will thus sooner or later be excreted again! In the end, every biological

structure lives and is maintained purely from cosmic energy! So if atoms and molecules from food are used for cell building or cell renewal instead of being excreted, this happens in an exchange process. No matter is consumed!

So far, the question why the ultra-weak technical scalar wave emission heats the whole body has not yet been plausibly proven. We also lack a comparison of both scalar wave types and then we come to the plausible solution.

Artificially generated scalar waves	Cosmic scalar waves
monopolar longitudinal waves	bipolar longitudinal waves
waves running into infinity	standing waves
intensity decreasing with distance	same intensity in the cosmos
linear Variability	natural logarithmic hyperbolic, scale-invariant spectrum
Conversion into kinetic energy at the speed of light	Conversion into kinetic energy with infinite speed

1. a bipolar scalar wave is a standing wave in the cosmos The body can draw as much energy from it as it wants. But it can never interrupt or even consume the wave, so it would no longer be a standing (!) wave.

2 All prime numbers (=origin numbers) are natural-logarithmic units in the cosmos. One can also say that the cosmos is "prime-coded".

3. the monopolar scalar wave is a metric wave, which in contrast to the logarithmic bipolar wave is "destroyed", i.e. converted.

4. as examples for point 2 and 3 the numbers from 1 to 20 are listed:

5. **1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20**

Bold marked are the prime numbers, i.e. the original numbers which are only divisible by 1 or themselves.

6. what does the body energy=cosmic logarithmic scalar energy do with the wave dimensions of the incompatible linear waves in order to convert them, for example, into prime number dimensions? He divides them, e.g. the 4 into 2x2 (thus obtaining 2 prime numbers) or 6 = 2x3, 8 = 2x2x2, 10 = 2x5, 12 = 2x2x3, 14 = 2x7, 16 = 2x2x2x2, 18 = 2x3x3, 20 = 2x2x5. Understandably, this means an increase in energy for the body.

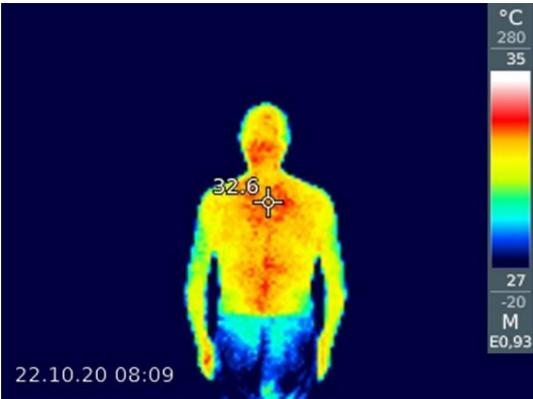

Note: It does not matter whether we give dimensions to the numbers (mm, cm, m, km, etc.) The ratio remains the same.

Ergo: Perhaps we could wish for this increase in energy for the body. Unfortunately, however, most of the dimensions of the body structures listed above are outside the dimensions of these artificially generated scalar waves! This is the reason why structural damage to the entire body water, cell organelles and cells can occur.

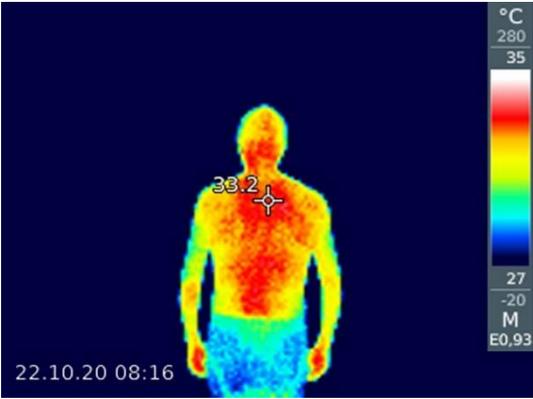

Intensity and duration of applied technical scalar waves and the body's resilience determine the point in time of the body or organ damage and/or the psychomental system as well as the damage of all symbiotic germs!

The reader only has to look at the darkfield images 1 and 2 again. The "disturbance" of the red blood cells should be warning enough, even if one should feel just as comfortable during the cohesion (money roll formation) of the red blood cells. The application of bion-tec-informed minerals clearly counteracts the artificial harmful wave application, as is confirmed by the dark field and thermal imaging images in our comparison.

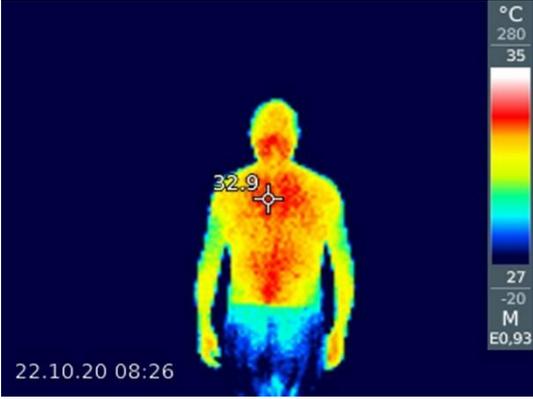

Thermal images with textiles

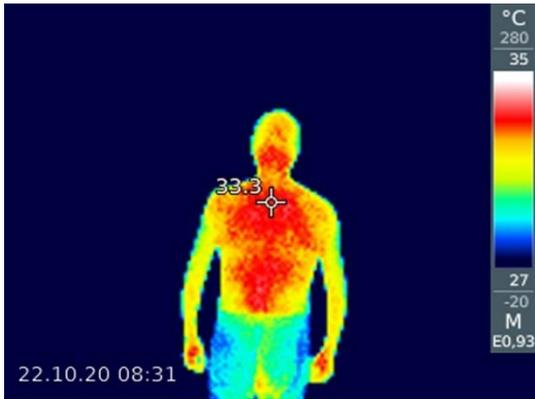

Input picture
skin temperature up to 32,6°C

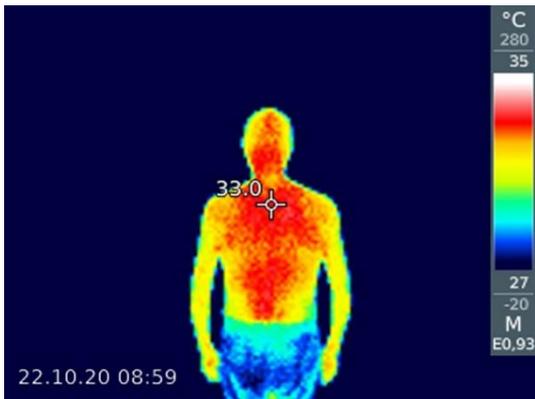

After a 6-minute mobile phone call,
increase the skin temperature to 33.2°C

A folded T-shirt with coated bion-tec-informed quartz powder was applied for 6 min: further increase of skin temperature

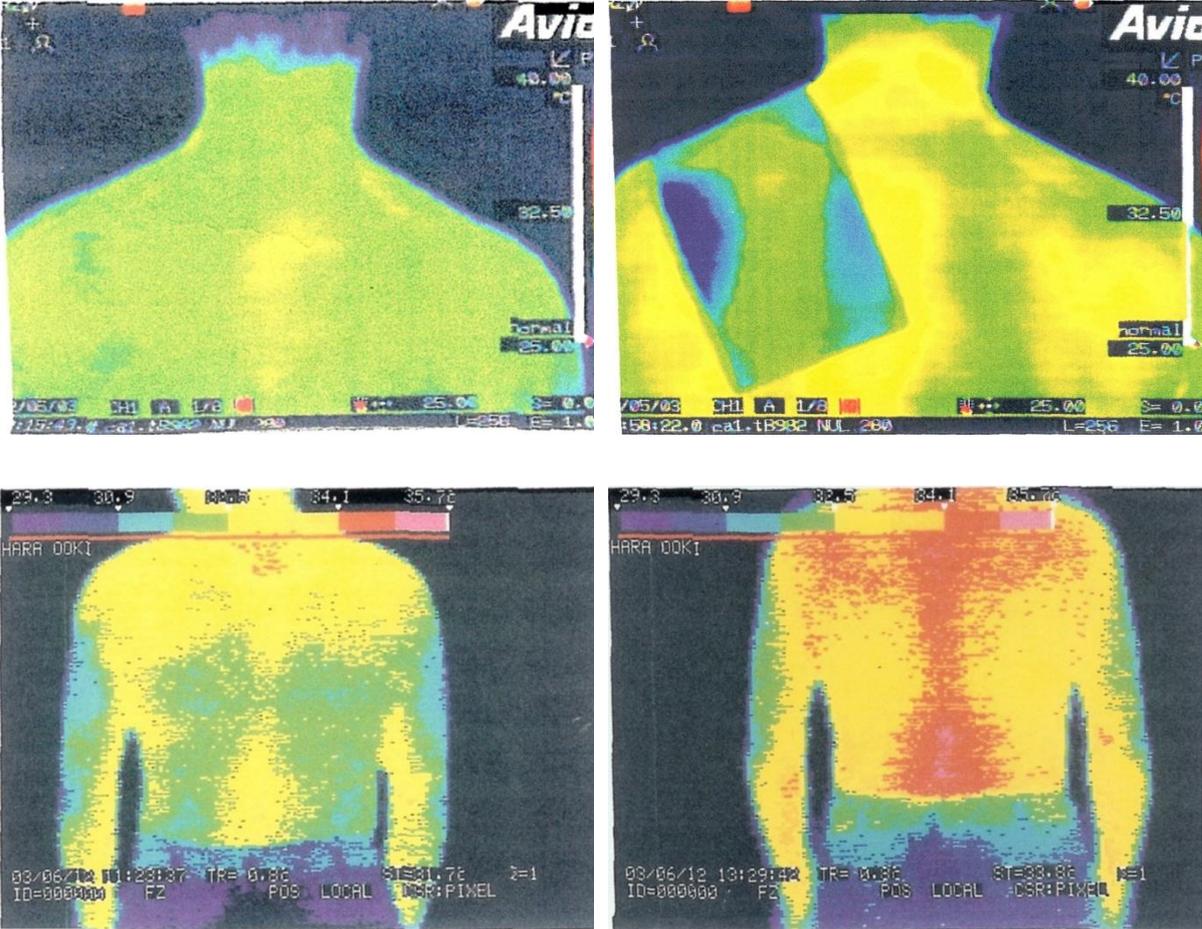

After 5 min further temperature rise

After about half an hour skin temperature
higher than visible in the initial image

In 2004, a Japanese medical research institute sent us thermal images with a bion-pad of the same size, which had not been changed until then, but without an E-smog test. The pictures are always fascinating and speak for themselves. We see the application of bion-tec informed minerals as a fundamental therapy of any other therapy.

The sequence of images clearly shows the warming of the entire upper body (including the upper extremities) after removal of the bion-pad. An increase in warming also takes place within two hours (last picture).

In further trials a bion-tec mineral-coated T-shirt - like the bion-pad before it - was placed folded together on the shoulder and neck area. The effect was identical to the bion-pad. The effect is just as reliable.

For the darkfield examination, just tapping the T-shirt with a finger for 1 minute is sufficient to ensure an optimised = optimal behaviour of the red blood cells.

In dozens of examples, the dark field images of bion-tec-informed textiles are identical to those of bion-pads!

Note: To date (end of 2020) the great importance of permanently informed quartz powders for the cell metabolism of all life has not yet been recognised by the major cloth industries. This does not only refer to the fundamental cell protection against E-smog, but also to the vibrations of all biological systems that are in fundamental harmony with the cosmic frequencies.

By means of a patent, the powders can be incorporated into all fabrics without any perceptible difference, in clothing, upholstered furniture, bed linen, shoe insoles, bandages, etc. etc. They can even be sintered into microfibrils (in a previously liquid state). And much more can be achieved with the informed quartzes. Those interested will find this in the further texts from www.ibit.gmbh.

Critical note: Great things are being done worldwide at the medical research base. Here, healing or, as far as possible, considerable improvement is being sought and in many cases has been achieved for a long time. The majority of the population knows nothing about this. Another part is made insecure. The big pharmaceutical industry "has the say", as Horst Seehofer already argued publicly in 2004. Their advice on medical legislation is not exactly ethically guided.

In my opinion, tens of thousands of deaths caused by drugs in Germany alone every year are evidence of poor ethics. In an American study in 2005, for example, a good third of pharmaceutical researchers admitted to having published criminal research results at least once before. The annual death toll of tens of thousands of consumers in Germany alone could also fit this description!

At the medical and therapeutic research base, which includes IBIT, there have been treatment options for decades which, for the above-mentioned reasons, cannot be developed due to increasingly strict regulations in the Medical Products Act (MPG).

Although IBIT had repeatedly drawn the attention of broadcasters and mobile phone manufacturers to the need for e-smog protection for more than 7 billion people, no response was even forthcoming.

Although IBIT had pointed out the need for concrete protection (e.g. upholstery fabrics or the fitting of informed pads on the backs of the upholstery) to all car companies because of the electronics emitting harmful radiation in all vehicles, we received an answer from only

one, which was, as expected, negative. They believe to protect the occupants by shielding the electromagnetic radiation by e.g. aluminium or carbon nets. But these are - as especially proven in block 1 - not the ill-making component!

When will we finally understand what the ominous electrosmog really is?

When will we understand the natural and artificial scalar waves that were experimentally proven in Russia 35 years ago?

How can we researchers ethically support all life at the basis?

This is how it has presented itself to us, and we recommend permanent protection against the artificially generated scalar waves (electrosmog) to every human being.
