IX. World first .....	95
X. Some Case examples.....	98
XI. Literature.....	104

### INTRODUCTION

In 2015, we are still on the verge of a new “era of therapy“. And yet, already there has been tremendous success; success which would have been unattainable by conventional medicine, especially in terms of quickness, reliability and lack of side effects. To let the cat out of the bag right away: The “new therapy” isn't all that new, but has been known to all cultures for thousands of years. And it has never been completely supplanted by “western” or “western orthodox” medicine. Novel about it are our scientific approach and its systematic advancement. The effects of the below mentioned products from this new branch of therapy can be verified through scientifically accepted methods.

It all revolves around **subtle energy** (= extremely weak energy).

This manuscript, however, is not only about the new type of therapy, but – quite intentionally – about the consolidation of the medical layman's consciousness. Everybody should seek to maximize their self-determination, strengthen their self-confidence and acquire fundamental knowledge about the body's biological and biophysical interrelations in order to make autonomous decisions (instead of simply trusting a physician).

The author will show you how simply physics, biology and medicine can be made comprehensible. Not only

that – it's going to be really exciting and highly interesting. You will become able to make yet unimagined changes pertaining to your health and quality of life. If you heed all the advice, your therapist won't be getting as many visits from you as he used to.

Notice for legal reasons: This document is no substitute for your physician or therapist.

**Note:** The author largely abstains from the use of specialized language in order to elevate general comprehension. The diagnoses in later case studies have been penned by those concerned “as is”; they have not been altered by the author.

### I. PRECONDITIONS FOR COMPREHENSION

If we ask ourselves what we live on, the fundamental answer is: Of course from nutrition, hydration and respiration (the oxygen thereof). Thanks to them, we can move, generate heat, breathe, think, feel, etc.

Alright. But I need to dig deeper, as the answer doesn't quite satisfy me: What happens with the food, the water and the oxygen? It's clear: After passing the digestive system, they enter the body's cells, are broken down by various enzymes and thus changed. In this way, different molecules that are particular to every living being – no matter if human, animal, plant, etc. – are formed. They replace the existing molecules in the body's cells. [Note: Molecules are compounds of at least two similar or different atoms. Their composition determines whether they are sugars, fats, proteins, vitamins, enzymes, hormones, etc.].

Excellent. So nutrients, water and oxygen are being exchanged with “used” molecules within the body's cells. This answer too is correct. But now we're back at our initial question. I'd like to know exactly how many atoms I “consumed” for my warmth, movements, heartbeat, etc., and what became of them.

The answer is surprisingly simple. One just doesn't consciously realize it, even though it's highly interesting. Fundamentally, medicine and biology are based on this very fact alone, which simply is: **Not a single atom that**

**has been absorbed will ever be used up.** As has already been mentioned, atoms are of course being employed in the material interchange within cells, but they themselves will at some point – be it hours, days, weeks or months later – be replaced and excreted. Therefore, life requires nothing more than **energy**, which is being produced by the transformation of carbohydrate, fat and protein molecules with the addition of oxygen and water. Without exception, all atoms reappear within bowel movements, urine, sweat and breath.

That is quite interesting: We live and work mentally and physically, we generate heat merely through energy. We do not consume a single atom to do so, but only extract the energy necessary for life from it.

So this energy itself doesn't have any mass, as do neither warmth, light, sound and last but not least thoughts and sensations. And there we are right at the center of the “mother of all science” -- physics -- already.

There is only one fundamental science on which all other sciences build. It is physics. And the entirety of physics itself consists of only one quantity. It is energy. Energy itself doesn't possess a lot of perceptible or measurable parameters. They are gravity, electricity, magnetism, scalar waves and neutrinos – and up until this day, that's it.

These quantities determine or control the entire cosmos. To understand single parts, let us begin with the whole. Usually, we think about beginnings and ends. But

they don't exist when it comes to a circle, for example. In order to avoid endless philosophical debates, let us envision a beginning, for example where the compass started drawing the circle. Initially, there was...nothing.

But “nothing” cannot exist. There has to have been energy. Therefore, space itself must have contained nothing but energy. And that's merely the beginning. Space consists of energy, nothing but energy. Energy doesn't have mass. It creates the state of the vacuum of space.

Yet, mass has been formed. How should one imagine this? I offer two feasible modern theories, the second of which will accompany us through this document, in order to inspire awe and excitement in everybody, so that humility and – consequently – altered ways of thinking, feeling and acting may follow.

1. 1st theory (Konstantin Meyl): Space energy consists of vortexes of all dimensions and magnitudes. Under certain circumstances, vortexes can compress ever further, eventually forming matter. To maintain this compressed state, a steady external supply of energy is required, again provided by either the cosmos or other compressed vortexes of typically higher energy. The gargantuan compressed energy we call the sun, for example, supports the much smaller compressed energy known as Earth with so-called neutrinos in the form of scalar waves. Again, this is massless energy, of which a certain percentage perpetually compresses within the Earth's crust, thereby making Earth grow.

2. 2nd theory (Hartmut Müller): Global-Scaling-Theory. As this physical model describes the entire cosmos, which – as we have seen – consists of a massive, empty space and some mass (dust, comets, stars, galaxies, etc.), it also describes the science of life (biology) and thus the science of healing (**medicine**). Therefore, it needs to be explained first – comprehensively, of course. You will be better capable of understanding medical statements, as well as the fundamental problems of you and your fellow man, afterwards.

The first theory concerns the term “scale”, already, which is contained in the term “scalar waves”. In the second theory, it reappears as a common term of the English language, namely “scaling”. So there is scaling within the entire cosmos. Maybe this initially reminds us of a yardstick. As we all know, it has a **linear** subdivision (like a ruler from math class). If a certain length is determined as 1 by it, twice that length is 2, thrice that length 3, and so on. With these units, we can calculate, construct, build, etc. Ultimately, it's a tool to establish order. But order according to linear dimensions doesn't exist anywhere within the cosmos! To operate in accordance with linear – i.e. uniform – dimensions is a remarkable characteristic of the human brain (so far, it still works).

But isn't the term “global scaling” a contradiction if the cosmos indeed does not exhibit divisions of the type imagined by our brains? How is it with global space? It has to be subdivided, from the smallest to the largest, in

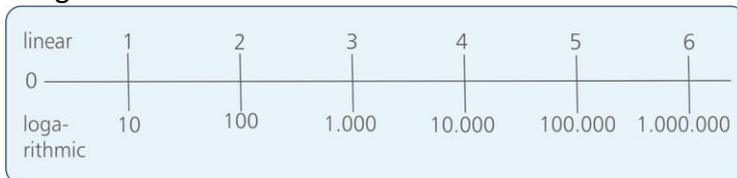

terms of the dimensions of its energy waves, the distances between celestial bodies, galaxies, etc.

And it is, only different. All dimensions – no matter if space, time or weight – from the diameter of the cosmos to the smallest unit of matter, from the highest energy of matter to the smallest of the vacuum – it's all subject to a **logarithmic** subdivision (scaling).

So now we only have to deal with the term logarithm. As its mathematical definition demands foreknowledge that not everybody has, we will do without math and explain the logarithm by means of practical examples. One will notice immediately how quickly our mind reaches the limits of its imagination, no matter if one is a scientist or a layman – there really is no difference in this regard. The scientist may be able to calculate almost everything with the help of algorithms, but apart from conceptions about his immediate environment, he will have no advantage except for a very negligible one.

The little trick we will use is to treat the logarithm as if it had a linear subdivision. Let's take the subdivision of a distance for example. Above we plot the linear proportion, below the common logarithm (of base 10).

Image 1

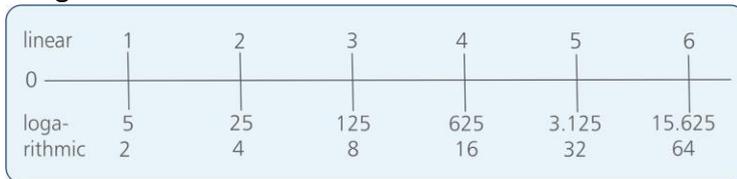

I can express as 10 km as 1 kilometer, one hundred as 2 and one thousand as 3, etc.

6 kilometers are still easy to envision, but how about a million kilometers? The imagination fails, already. From there, things become mere numbers (1 million kilometers equal the common logarithm of 6). And how else are we supposed to describe the dimensions of the cosmos if we are unable to imagine them? In the case of the yet relatively easily imaginable value of 12, we're talking about a 1 with 12 zeroes, i.e. 1 trillion kilometers.

But of course, we can apply any arbitrary logarithm to our scale, for example of base 5 or 2, which would make things look like this:

Image 2

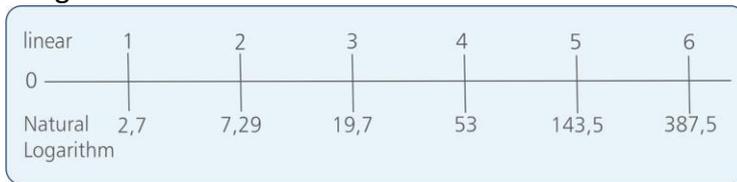

In case of the common logarithm, we multiplied any successive number by 10, in case of the base 5 logarithm, we multiply by 5, in case of base 2 by 2, etc. Thus, the number above displays how many times our initial value (10, 5 or 2) has been multiplied by itself. In the process, each successive unit becomes much greater than all its predecessors combined.

But these logarithms do not exist within the whole of the cosmos. They are merely meant to serve as a comprehensive example.

All dimensions, such as size and weight, are subject to a single logarithm, be it within the cosmos, on Earth, in any living organism, the dimensions of mountain ranges, bays, etc. – the so called **natural logarithm**. Its base is 2.7 (rounded). So let's redraw our scale to be **valid within the entire universe**.

Image 3

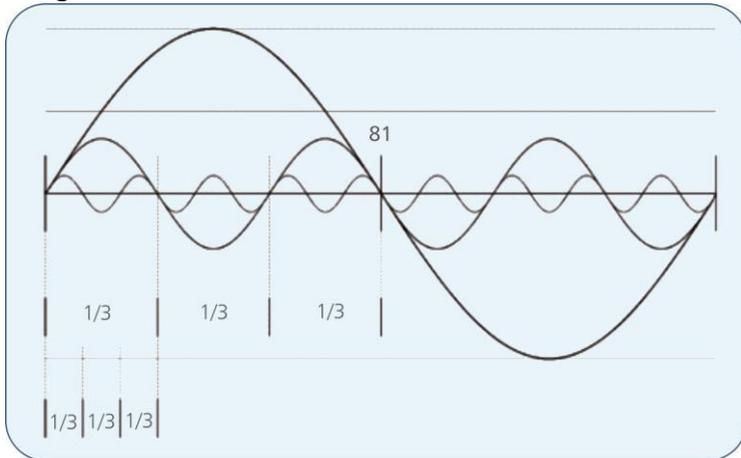

In case of the easily imaginable number 14, the natural distance within the cosmos is already over a million kilometers. This is already unimaginable. But now comes **something totally inconceivable, which lends new meaning to all of our human strife**.

Firstly: The diameter of the cosmos is 162 logarithmic units (2,7). Mathematically, this is very well supported by the global scaling theory (and we will ignore theories that revolve around what exists outside of it). These logarithms are all divisible by 3 without remainder.

Thus, the logarithmic half of the diameter is 81. By the way, a note about the term “wave”, which is often employed when speaking of energy: A wave can be

described by 3 dimensions, namely wavelength, magnitude and direction. Let's draw the largest possible wave within the cosmos and then – as all subsequent dimensions are arrived at through division by 3 – also the 2nd and 3rd.

Image 4

If the largest wave corresponds to 162 logarithms, its midpoint can be found at 81, and the drawing clearly illustrates how all waves that are divisible by 3 have to pass through this midpoint. This drawing is a linear representation. Were we to depict the curve logarithmically, we would find that we couldn't, for the midpoint (81) wouldn't be discernible from the left margin; even if the large wave were scaled up to be thousands of kilometers long, one couldn't draw it distinctly enough. I'm sure that by now you get a sense

of the impossibility of imagining logarithms beyond certain dimensions.

And now, the author will “annoy” you with an unimaginable mathematical fact of central importance to our life. The above examples have shown how logarithmic values, while initially growing slowly, soon reach ever more enormous dimensions. At the point where matter starts to manifest, it still is almost infinitely small. Our common units of measurement are of no use; in comparison to its initial dimensions, a millimeter would appear inconceivably large. Even with the most sophisticated of magnification machinery, it requires in excess of 60 logarithms for anything to become visible.

Eventually, we arrive at logarithm 81 only to realize in astonishment: That is merely the size of a human. Or even better: That is the length of a **chromosome**, if untangled. Under no circumstances should you try to imagine half the diameter of the cosmos as 1.7 m; logarithmic thinking doesn't at all come naturally to us.

And yet, we perceive brightness logarithmically, we hear logarithmically, and we sense cold and warmth logarithmically.

Practical example: We spend half an hour in a basement in near complete darkness and proceed to enter glaring sunlight at noon. The differential in brightness amounts to about a billion. The brain, however, only perceives the logarithm of a billion, which is approximately 21. And so,

the subjective difference in brightness is merely 21-fold. Yet, it is enough to make us blink and almost feel pain.

Another example: You swim in water of 5°C; it feels “icy cold”. At 10°C, there isn't much difference. At around 20°C, it starts becoming bearable, at least for longer periods than at 5°C or 10°C. 35°C are comfortable, but at only 5°C (40°C) more, things become intolerable. In relatively short time, merely 3° more are fatal.

A car with an interior sound level of 70 decibel is comfortably quiet. At only 8 more decibels, we perceive it as loud. If one has driven for several hours at 82 decibels, it's best to get some rest in quiet room in order to recuperate the nervous system.

But back to the chromosomes which carry our genes. Do you anticipate the profound meaning of the chromosome length, which just so happens to lie on the midpoint of the cosmic diameter, where all waves in space have a common center (nodal point)?

Now we have arrived at the fundamentals of biology and medicine. Only a few more prerequisite explanations in order to consolidate our medical thinking.

1. The vacuum of space

In the beginning, the vacuum of space, which somehow contains energy, was mentioned. Of course, the oscillations of matter and the vacuum need to be in unison (harmonic, synchronous,

resonant), or else the entire system would collapse.

### 2. The wave

Each of the infinitely many waves fills the entire cosmos. In theory, their different lengths (logarithmically divisible by 3) and magnitudes are equal at all points in the universe. Physically speaking, they are also called standing waves. They require a constant energy influx from somewhere.

When we were children, we took a long cord, tied one end to a fence and shook the loose end rapidly and rhythmically until a regular wave was produced. If the movements were too quick or too slow, too weak or too strong, our beautiful wave collapsed in on itself. If our own movement was just right, the wave remained harmonic.

### 3. The notion of time

Very important: If in theory, all standing waves are measurable at any point in the cosmos, all our notions of time become irrelevant, as the measurements in the human-defined past, present and future have to remain constant. The implications this has on all kinds of therapy will be explained later.

### 4. The harmony

The harmony of oscillations is also maintained if the vacuum of space and matter shift their respective pattern of oscillation. Because the

vacuum cannot be entirely void; it is interspersed with galaxies (star clusters), stars, comets, dust and the smallest of particles. And matter in turn consists of more than 99.999% vacuum. Just as stars (suns, planets) are vastly apart, so are atomic nuclei and their orbiting electrons.

Therefore, nuclei are also very distant from one another. But as the distances between stars are unimaginable on the macroscopic scale, so they are on the microscopic scale.

Example: Our sun is 8 light minutes apart; that is 480 light seconds. A light second is approximately 300,000 kilometers; so our sun is at a distance of 480 times 300,000 = 144,000,000 (144 million) kilometers. Who can possibly imagine that? The next nearest sun is Sirius. It is several light years apart. Let's just save the paper required for printing this number. This is our immediate neighborhood. If one examines the dimensions of both suns and the billions of other stars in the universe, they are all divided by inconceivable distances. When scaling them down to the size of atoms, the ratio between vacuum and matter is maintained.

Let's play a game to

Image 5: Somewhere in the prairie, a female butterfly excretes a barely visible drop of her sex hormone into the air. At almost the same time, a male butterfly of the same species located 10 kilometers apart locates the female. It can “estimate” direction and distance.

## PRINCIPE OF STANDING WAVES

aid our imagination.

Let's take Earth as the center and draw a circle intersecting Sirius around it. The circle's diameter lies vastly outside of the range of our imagination. Now we shrink the whole cosmos down to the size of Earth, doing the same with the circle touching Sirius. How large is it by now? – Let's skip the calculations; it would be far smaller than any visible point. What meaning do Earth and all of our human strife have??? And yet: Regardless of size, there is a **right to life and health**.

What fascinates the author in particular is the incredibly weak (subtle) energy, which permeates the cosmos as standing waves and regulates all stronger energies in living beings. For example: Somewhere in the prairie, a female butterfly excretes a barely visible drop of her sex hormone into the air. At almost the same time, a male butterfly of the same species located 10 kilometers apart locates the female. It can “estimate” direction and distance. Neither wind direction nor air particles interfere with this locating process (= the principle of standing waves).

The energy patterns of the sex hormone are being modulated upon the cosmic wave patterns, similar to our radio communications technology (albeit in this case without standing waves).

Examples of the effects of subtle energies from the domains of plants and animals are continuously being discovered in the more recent branches of the biological

sciences. In order to set the tone for the next chapters, let us pose the question whether the “packet of information”, as transmitted through matter (a droplet) in case of the butterfly, can also exist within the vacuum. Another example in this regard:

Two biologists measure the action potential (a physical measuring method to quantify a living being's energy) of 10 plants in separate pots at fixed times. Then, one of the scientists travels 5,000 km away. The next day at 10 am, the remaining one measures drastically reduced energy levels in the third plant from the left. From there on, the value constantly remains low, without any discernible external cause. When the traveler returns 2 days later, the second biologist wants to tell him of the phenomenon. Before he does, the returnee immediately heads for the plants, rips out the third from the left and asks if its action potential had plummeted at 10 am 2 days earlier. Because it had been at this point that he had made the decision to rip it out upon his return. Experiments such as this have been successfully repeated many times.

Another intriguing fact is the mutual influence between matter and living beings (Note: Theoretically, this is a necessity). For example: Chicken eggs are artificially brooded. In front of the incubator, a robot roams a fenced-in area. Upon collision with any obstacle, it changes direction randomly. After hundreds of changes in direction, it has travelled the enclosure pretty evenly. Now, the chicks that have hatched in the meantime are being released from the incubator through an automatic

door. The first and only thing moving in front of them is the robot. Instinctively, the chicks treat it as their mother. Immediately, they start making demands by chirping. What happens next? From there on, the robot predominantly moves within the third of the area that is facing the chicks.

There are many more examples. And none of them have anything to do with esotericism, but are solid, repeatable biophysical facts of modern science. In all cases, **regulatory energies** or information are the **cause**, the **controllers** that act as **spatial patterns of standing waves**. In doing so, it is irrelevant whether the information patterns are localized in the vacuum or any kind of matter. **Information patterns are everywhere in general. They are the infinite multitude of keys that fit into the infinite multitude of keyholes.**

Let's refine our definition of the central term **“information”**: There are as many notions of it as there are authors. Going by the past sections as well as the author's globally unique information technique, there is only one valid definition. To start with, it will be explained as follows:

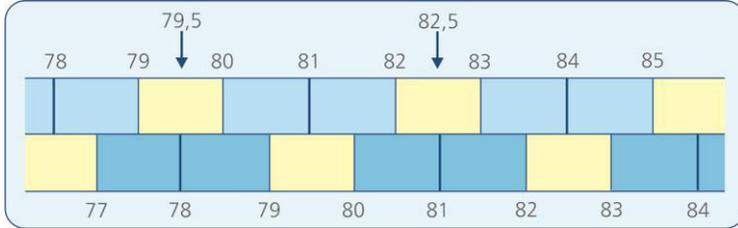

1. Information consists of energetic longitudinal waves that scale logarithmically (scalar waves).
2. Information has spatial patterns.
3. All spatial patterns are infinitely variant (polymorphic).

4. All variations harmonize among each other through natural logarithmic division (order).
5. The infinitely many energy patterns harmonize (oscillate equally) with any pattern of matter, and thus all loving structures.
6. Information transmits subtle (very weak) energies.
7. The transformation of information into kinetic energy or electromagnetic energy can be measured, as is well known. A direct measurement of scalar waves, however, is impossible.

Note: The critical reader might ask how such a weak energy pattern can possibly move an elephant or a mosquito. The astoundingly simple answer will be revealed later.

In conclusion, the oscillation ratios of matter and vacuum shall be depicted simplified. To do this – and to better illustrate the point – we will draw fields instead of lines, naturally in a three stroke rhythm, as we now know. We choose the logarithms arbitrarily around our chromosome length.

Image 6

Explanation: The matter oscillations are above, those of the vacuum below. Above, the wave, which ranges from 79.5 to 82.5, has its midpoint at 81. There, its matter value is nearly zero. Below 79.5 and 82.5, the vacuum scale shows the values 78 and 81 (all 4 numbers are divisible by 3!). Below the number 82.5, i.e. just where matter has its minimum, we see the number 81, where the vacuum value shows its maximum. Therefore, both systems oscillate harmonically and synchronously (uniformly).

These fundamentals apply to the entire cosmos. One could simply invert the schematic above, using the above values for the vacuum and the below values for matter.

What the graphic does not show, however, is the following: Picking an arbitrary segment from it and resizing it to fit, it's essentially congruent with the original. So this scheme is exclusive to the whole of the cosmos!!!

Up until now, we tried to simplify the depictions of the oscillations of the matter and vacuum fractions. It is on

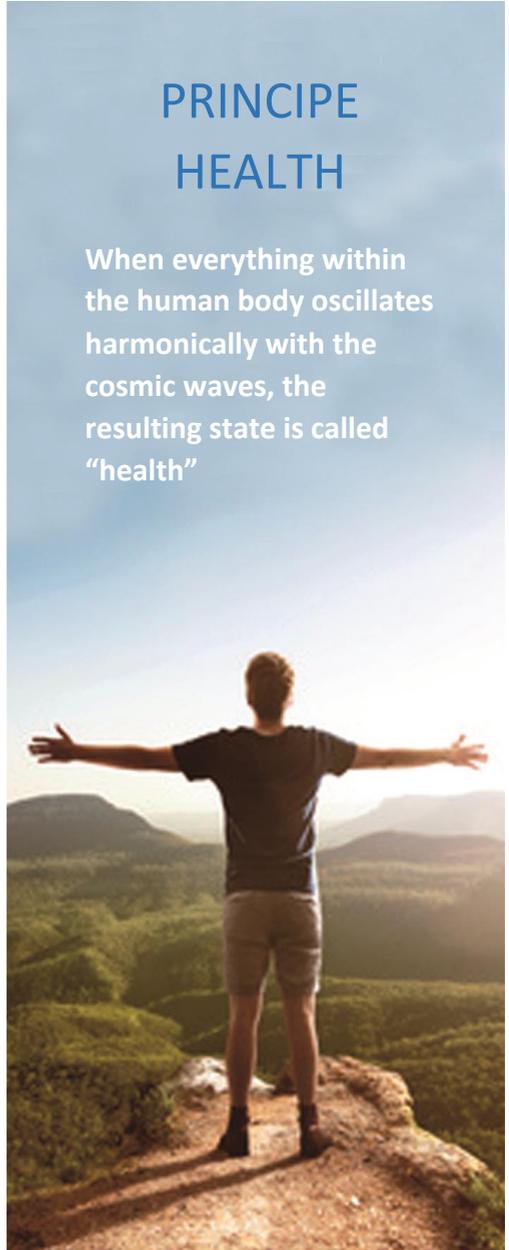

this understanding that this new type of therapy is based. Because we humans (as well as animals and plants) are tuned into the **cosmic matter-vacuum-system** as **matter-vacuum-systems** ourselves, including our whole body, its organs, cells, cell organelles, fluids, etc. Meanwhile, all of them possess dimensions of precisely known ratios among themselves (logarithmically divisible by 3), so that they can oscillate in sync with the cosmic system! **When everything within the human body oscillates harmonically with the cosmic waves, the resulting state is called “health”.**

**Whatever deviates from this rhythm is thrown out!**

If it's merely miniscule areas (a rather constant occurrence within the body), it's seldom noticed.

## PRINCIPE HEALTH

When everything within the human body oscillates harmonically with the cosmic waves, the resulting state is called “health”

But from a certain duration and/or severity, we do notice, initially as indisposition and eventually as sickness.

### II. SPACE INFORMATION

How should one imagine those oscillations, or rather infinitely many mutually harmonic oscillations? Do they act sequentially? From one direction? Or all simultaneously and from all directions at once?

The answer is simple. As the entire cosmos is, at any point and any time, permanently permeated with all oscillations, there are no more directions. They are simply everywhere at all times, and thus without direction. They only differ in size, magnitude and infinite variety of shape. All biological systems have submitted to these proportions in order to be able to oscillate synchronously (uniformly): The dimensions of the human body, the chromosomes, genes, cells, cell contents, etc. They all display the cosmic oscillation patterns “responsible” for their dimension range (predominantly length and weight measures).

The body's various cell types are at the center of medical consideration. According to their diversity, they and their inner contents do not oscillate with a few, or even a million, frequencies, but instead with innumerable many – and of course simultaneously. The whole of these spatial wave patterns provides the cell with information on how to oscillate correctly in order to enable a harmonic life. Therefore, every oscillation pattern is called **information** or – in this particular document – **information pattern**. They are physical information patterns directing all life, or more precisely:

**biophysical information patterns** (“bios” is Greek for “life”). So the term describes forces that maintain and regulate life.

Here is where it gets very interesting and, for most people, novel. In the beginning, we have been dealing with the question what we live on and concluded that it was energy, not the consumption of matter (atoms).

But how is this energy that enables movement, organ activity, thought, etc. and provides warmth regulated? Couldn't the energy from nutrients be released all at once, making a living being explode? That this cannot happen is due to the excellent cooperation between the brain, the nerves, hormones and enzymes, which secure a slow and orderly transformation of the nutritional molecules through a complex switching mechanism.

Hormones and enzymes are the keys for the enormous release of energy. These keys only consume a fraction of the energy contained in food, leaving the lion's share for our activities. All this is well known.

But here's the kicker: Who or what controls the brain and nerve cells, hormones and enzymes? The energy that is required for this must once again be significantly smaller than that consumed by the brain and nerve cells, hormones and enzymes.

And how small it is! Unimaginably miniscule for us, maybe a millionth or even a quadrillionth (1 divided by a 1 with 15 zeroes). No one can imagine such a tiny

amount of energy. As we have now learned, it of course stems from the cosmos in the form of information patterns. Without their oscillations, there would be no regulation!

Physically speaking, energies are being “transformed” between various states. Kinetic energy is transformed into heat, for example, or Bion energy into electrical or magnetic energy, or light, etc. According to experts in energy medicine, 2/3rds of the daily transformations are sourced from the cosmos, with only 1/3rd provided by actual food. This means nothing else than an exhaustion of nutritional energy (matter energy) that is used as Bion energy. But it is – as is cosmic energy – subtle, i.e. very weak. Because of this, it is also required – as we now know – as “regulatory energy” in order to coordinate all processes of life. How can this energy from the cosmos (vacuum and energy) and food (matter) be sufficient to provide for the needs of humans in terms of movement, warmth, etc.?

The solution becomes plausible once one imagines the wavelength of a cosmic standing wave in harmony with a body cell, transforming its energy into kinetic energy of the cell. Theoretically it would then be depleted. But we do know about resonance between cosmic and cell energy. Therefore, the “depleted” cosmic energy has to be replenished immediately – and this occurs at **infinite speed!** (or “only” light speed according to Turtur).

Mass in contrast is very inert. Even though small parts of the cell oscillate a thousand times per second (=1000

oscillations), it pales in comparison to the constant presence of a standing cosmic scalar wave.

Note: a) There will be an end of our schizophrenic relationship towards energy in general at some time (hopefully soon), specifically by abandoning current means of energy production (fossil, nuclear, but also wind and solar power, etc.). b) Of equal importance is the return to natural eating habits.

Addition to a): Each household and each factory, all means of mobility and all other technologies could be brought “into harmony” with the cosmic energy – entirely without harm (health, environment). Even though the cosmic energy is very weak, its perpetual presence makes it incredibly strong in summation.

Addition to b): Man is the only animal that spoils its food before consumption, devalues and macerates vital ingredients by heating and consumes animal products of which he can only tolerate small amounts if any. Only by switching to biological nutrition (vegan raw food from organic farms) could all severe diseases be reduced significantly or even eradicated entirely. This has been demonstrated for decades by an institute in Florida (Leader: Dr. Brian Clement; see also China study; see bibliography), for example. More than 60 years ago, Prof. Wend (see bibliography), today succeeded by his son, has performed thorough research showing a link between animal proteins and the development of Diabetes mellitus. In summary: animal proteins clog up the intercellular and connective tissue (the matrix, our

largest organ, in which all metabolic products are exchanged). The more connective tissue gets clogged up, the more insulin has to be produced by the pancreas for sufficient sugar molecules to reach the body's cells. This goes well until the pancreas is overstrained and fails. From there on, any additional intake of sugar or long-chain carbohydrates causes harm. It is only this condition that can be medically identified, correspondingly leading to improper treatment.

Without the **regulatory energy = information energy =** simpler put: **Information, information patterns =** generally: **subtle energy** life cannot exist, let alone health.

If you have understood this, you will now likely wait impatiently for what you're already anticipating.

### III. DISEASE

If cellular systems, under whatever circumstances, receive too few or erroneous information patterns, they diverge from the synchronous oscillation. At first, this interferes with the cells' whole metabolisms. We experience indisposition or even illness.

Sometimes, indisposition only emerges periodically, days, months or even years apart. Again and again, the cell systems (organs) manage to tune back into the cosmic information patterns. But at some point – caused, for instance, by fatigue – they can no longer prevent parts of them that have so far remained unharmed from being affected, until the cell systems get too far off balance, eventually. This state is what's called “disease”.

So the root cause of all diseases is a disharmony (= insufficient coherence) of certain cell contents with cosmic information patterns. In any case, a disturbed cell metabolism is the result.

This insight calls for completely novel approaches to therapy.

One thing needs mentioning before: In case of e. g. an accident, the cell metabolism of the affected part collapses. Of course, the information energy cannot work normally, for one because the bruising and tearing deformed the cells and whole cell systems to no longer coincide with the cosmic wave patterns, for another

because the influx of nutrients is disturbed or cut off. In these cases, the directing energy is initially powerless.

Another example would be a poisoning (e.g. snake bite), causing blood to coagulate immediately within the blood vessels. This brings the entire cell metabolism to a halt.

A third example covers congenital defects. In case of deformity, not only the cell systems' dimensions are different from the information patterns, but also “higher tiers” such as blood circulation, hormones, nerves and this the “highest energy tier”, the sufficient relaying of nutritional molecules.

In case of other illnesses, the same scenario unfolds: Differed dimensions within the cells or of the cells themselves prevent further resonant oscillation with the cosmic information patterns. The cosmic key will no longer fit the cell's keyhole. Sooner or later, the brain will display disruption that is known as disease. Regardless what diagnosis is initially made: **it is irrelevant for the new therapy!**

So the dimensions of single, multiple or all components within cells have changed. This means that their wavelengths have changed, as well. They no longer coincide with the invariable cosmic wavelengths.

If it had been in sync with the cosmic system ever since conception, what made the cell change? Things had been going well, initially, after all...

A superficial answer is given by the many diagnoses from western medicine. Superficial because they never even consider the cosmic energy and thus – as has now been extensively illustrated – the foundation, don't recognize it and, if need be, deny or ridicule it.

By the way: It is always those who believe that their education has enabled them to know absolutely everything that are the most pretentious. It can only be what is allowed to be. Which is why in magazines and other media, with the internet in particular, so much nonsense can be heard when the establishment has to surrender to new found facts. In this regard, Wilhelm Busch once wisely and humorously said: “It is when one understands nothing that the mouth is loose.”

Just think of acupuncture (as it is a method of information therapy, it will be covered later). How many decades had to pass before it came to be accepted due to its many undeniable therapeutic results? Nowadays, in Germany public health care covers the cost of this kind of therapy. But yet another branch of energy therapy is still struggling for recognition – homeopathy or isopathy. But more about that later.

Besides: By what right does one category of science (in this case conventional medicine) judge another (in this case energy and information medicine), especially when understanding none of it?

Altered dimensions of cell parts or cells themselves can be caused by a wide variety of “attacks”. Let's take the

diagnosis “flu-like infection” as an example: Viruses attack certain cell systems and insert parts not matching the cell oscillations into the cells in order to make it reproduce those parts. In this way, the cell receives an oscillation pattern incompatible, i.e. disharmonic, with it. The consequence is a “**misguidance**” of the cell metabolism. It is this misguidance that lowers the energy metabolism, making us feel feeble. We feel ill.

But such misguidance, caused by viruses or other germs, is a blessing, initially; it causes certain toxins to form within the cells which in turn eliminate the invaders. This defense mechanism also kills primitive organisms. Higher organisms, such as vertebrates and thus humans, possess a second layer of defense (= immune system), which also operates between cells and within the lymph and blood vessels.

But if the invaders turn out to be too powerful, too much of the defensive substances, which are harmful for the cells themselves above a certain concentration, can be produced; the cells themselves then die. Because of the importance of the onset and progression of a disease it should be emphasized: **The cosmic wave systems, which regulate the entirety of the biological processes within each and every cell, are the key to health and all life!** As they are standing waves, they are registered by all cells at the same time; differently put: At any point in time, each cell experiences the same oscillation as all others.

But the same applies for **harmful waves**, which are emitted by the invaders (e.g. viruses). They too can be received by all cells at once (and therefore of course any brain cells).

Example: Local cells are forcibly resisting the germs within a pimple. One can easily recognize this by the reddening of the skin. All body cells, including the brain cells, register. But the cells not under direct attack need not react. The brain has developed special sensitivities for that. In the case of the pimple, consciousness is also invoked, yet merely responds: Doesn't matter, they can handle this locally, and the harmful information is of too little potency to threaten other cells – except for those in the very vicinity.

Another example: In case of a more severe injury (contusion, tissue fissure, bone fracture, cut, burn, surgery), things look quite differently. The extent and thus range of harmful oscillations can significantly affect other body cells beyond the injury, in any case also the “supreme regulator”, the brain. This can affect the entire cell metabolism, resulting in fatigue, pain and depression.

Because of the importance of understanding the new kind of therapy, both examples – germs and injuries – shall be examined further. In both cases, the same thing happens, regardless if caused by germs or injuries (or something else, mentioned later): **The cells attuned to the cosmic energy patterns are being partially or even**

**completely disturbed by harmful waves (= waves not meant to regulate the metabolism).**

One question immediately arises: What to do?

If we call the cosmic oscillations “directing energies”, we can call those disturbing the metabolism “**misdirecting energies**”.

Misdirecting energies are involved in any kind of illness. Therefore all illnesses are subject to the same therapeutic approach! Now we need to know how those misdirecting energies are causing metabolic chaos within cells. There are three physical possibilities: 1. The misdirecting energies are dominant. 2. The misdirecting energies “neutralize” the cosmic energies. 3. Both occurs simultaneously.

So what to do? Can you provide the theoretical answer, already? The theoretical answer is: The cosmic oscillation patterns (= information = information patterns) within the respective cells has to be amplified.

Two possibilities shall be discussed. **1st therapeutic option:** The oscillation patterns are artificially produced. So-called resonance devices have been in use for years. They work satisfyingly, but not too reliably. This is due to two weaknesses. We are constantly talking about spatial wave patterns forming out of an infinite multitude of variation and fitting the dimensions of the cells just like a key.

But a resonance device can never fully reproduce these patterns. It only provides the cell with the resulting vector (= a physical symbol for the magnitude and direction of a wave, calculated from all spatial waves). This works, but despite being able to amplify these waves, it also comes with the following disadvantages: a) The waves are linear, not logarithmic, as would be the cosmic standard. Besides: There already exists a device which employs logarithmic waves. But it, as all others, lacks. b) The spatial patterns. c) All devices powered by an artificial source of energy (electricity) emit harmful radiation themselves (more on that later on the topic of electric smog).

Frequently, the misdirecting energies within cells are also linear. The device can negate these, not least due to its upwardly adjustable power.

The **2nd therapeutic option** features arbitrators of the cosmic energy patterns which require no artificial power source, yet are still able to amplify them. Additionally, these intermediaries need to be able to cover the whole spectrum of biological information, as the cells' respective disturbed information patterns remain unknown.

Two excellent arbitrators of cosmic energy are known.

**1. Water.** It “stores” all conceivable patterns, including all cosmic and all synthetic ones, e.g. those of chemicals. Stored information patterns (=information) range from all cosmic to all harmful information – usually produced

artificially or stemming from the ground (discussed later). The artificially generated energies can potentially dominate the cosmic ones. But they might also dominate other harmful radiation. Possibly – and prudently speaking – artificial energies are required by the body cells to strengthen essential cosmic energy patterns. But that should not occur over longer durations, tops being somewhere between 1-30 minutes, for 5-10 applications overall.

Example: A 74 year old woman was treating shoulder pain that had endured for months with a magnetic mat, which she had placed into the upper region of her bed. Already after the first night, she was nearly pain-free. Fearing resurgent pain, she left the mat there. About 3 weeks later, she experienced severe pain in her abdomen, which kept growing despite the mat and intensive medical therapy. The diagnosis was a therapy-resistant Diverticulitis (incurable inflammatory bulges) of the entire colon as well as an inflammation of the lower small intestines. The surgical removal of a majority of the noticeably emaciated woman's colon tissue was planned to take place within weeks when the author was consulted. The case was clear. The magnetic mat was disposed of immediately. After 4 days of application of a bion-pad® (discussed later), the pain was gone completely. When asked, the patient reported having felt shoulder pain, although it was dwarfed by her intestinal pain. This problem could be resolved by chirotherapy within seconds.

By the way: All chlorine molecules can be removed from chlorinated water, for example. However, the harmful

information of the chlorine remains in the water, causing a considerable misdirection in all cells! They have to be neutralized by the respective cosmic control patterns.

To use water as an arbitrator, all harmful oscillation has to be removed from it and the cosmic information amplified. This is a very complicated process. According to the author's research, the main problem proves itself to be the “instability” of water: It constantly reabsorbs new harmful information. (This might pose a severe problem when producing homeopathics).

**2. SiO<sub>2</sub> = silicon dioxide = quartz.** Next to oxygen, silicon is the second most abundant element on Earth. Silicon oxide is added to many pharmaceutical drugs in tiny amounts; its properties of metabolic stimulation have been known for a long time. Unknown to most pharmacologists, however, remain its natural ability to direct metabolic activity through many wave patterns; also unknown is its additionally present misdirecting energy.

Its main advantage to water are its following three significant properties: Its higher informative force, the erasability of its harmful oscillations, its shielding against the accumulation of new harmful waves and therefore, the saturation and “unerability” of the amplified cosmic information patterns.

In 1999, the author succeeded in making a breakthrough to the new age of therapy, for the first time cleansing

quartz particles of certain dimensions and certain harmful radiation contents by means of a completely unconventional and unorthodox process, thereby opening up the entire biological spectrum (= bandwidth) to the cosmic information.

But that wasn't all. All information patterns could be amplified to a significantly higher magnitude (up to the highest “radiosity” of the quartz particles), totally blocking all externally “attacking” harmful radiation.

Previously unthinkable methods of therapy are now within reach. Before, one was accustomed to swallowing some kind of chemical, biochemical or biological compounds; now, nothing needs to be ingested at all. Instead, the following logic takes the lead: If none of the atoms making up the pills that relieve my pain isn't consumed, but only certain information contained within are actually effective, why swallow anything in the first place? In addition, the pills frequently have undesired side effects. And another thing needs to be considered: After taking the pill, there is no way back; if it should cause strong side effects, such as an allergy, it might endure for days. Frequent ingestion can also cause an allergy, for example, making any further intake impossible. There are further, more severe side effects, up to death.

What is causing the side effects of chemical compounds? You probably never heard about the fundamentals of this question up until reading this book. But now you know, summarized as: There is harmful information

emitted by these chemical molecules, disrupting the flow of the cosmic information patterns. This is also the root cause of any allergies.

All synthetic products emit a certain amount of harmful radiation of various magnitudes! All artificially generated energy waves also come with a proportion of harmful radiation (see above: resonance devices)!

The synthetic fibers (micro fibers) in clothing, for example, give off a considerable amount of harmful energy, although most people do not immediately respond to it intolerantly. Most never experience any discomfort (= symptoms).

At this point, severe diseases, such as cancer, shall firstly be referred to- There are many theories as to its cause, the necessary preconditions, known toxins (tobacco, etc.), animal proteins, metabolic changes in the smallest of cell systems (e.g. the capillaries). Of course, one can make decisive provisions for all of these. But only one thing is sure: Without the direction of the harmful information and thus its dominion over the cosmic information within the cells, there can be no cancer! This statement makes clear where a sensible therapy has to start. In cases of astonishing cures of cancer outside of orthodox medicine, the administration of a compound or combination of compounds definitely succeeded in displacing sufficient harmful information by cosmic information in all afflicted cells.

At this point I would like to establish a rule: The more severe an illness, the more expansive the therapeutic approach of methods that have proven to work has to be.

You now know about the foundation of the new branch of medicine and have learned some essentials for self-determination from it. The satisfaction of a researcher and author grows with the comprehension of his readership. But what good is all comprehension when it doesn't significantly reflect in practice?

Don't worry – this whole topic functions as the “club from the bag”. The necessary research can never fail to materialize in the face of such insights.

In 1994, the author of this book got started with his medical research project, to which he has been dedicated full time ever since. Back then, the new physics (global scaling) was not yet taught. Therefore, experimental research was a priority; Calculations were hard to get by. But eventually, the initial spark for a new biophysical energy therapy not reliant on an artificial energy source (e.g. electric current) set things in motion.

In 1999, the first patent was registered: a **bion-compress**. There were many obstacles to be overcome on the way to researching it. Only the effect of quartz, especially when bound in plants (horsetail), was known. But apart from the question which biophysical compounds were most conducive to its described biophysical effect, there were further sizable problems

to be solved before successfully continued research became a tangible possibility.

- What sizes of quartz particles to use and in what proportion to mix them?
- How to package them? The containers had to be water- and airtight; they had to be able to adapt to the body's shape and the quartz particles may not shift within them. The rather ingenious solution was the combination of the quartz particles with rubber, rubbery compounds, silicone, etc.; they are liquid before production. The quartz can be stirred into them.
- The biggest problem was the permanent storage of the entirety of biological oscillation patterns while temporarily deleting all harmful information present within the quartz, see above. (This harmful information consists of natural and – due to the mechanical grinding process – synthetic components).
- Eventually, a completely novel information know-how covering all requirements could be developed: Deletion of the harmful information from the quartz – input of the entire biological information spectrum in amplified form – blocking of all possible new information – permanently invariable strength of the information transmission to the body cells. This information process is probably unique and completely safe.

As has already been mentioned, the **silicone compress** was “born”, a silicone product out of medically certified material, 2mm thick, flexible, available in various sizes (see photos). The European patent for an improved successor (distinctly named **bion-pad®**) was granted in 2009. Now let yourself be surprised by the beginning of a new way of therapy.

Image 8: bion-pads

### IV. BION-PADS®

The bion-pad® developed by the author, frequently named compress, transmits all biological information. Therefore, it is suitable as a means of therapy in general. In most cases (wounds, swelling, pain, inflammation, light bronchial asthma, cough, light depression, sleep disorder), it alone is enough. In more severe cases, when the information power of the bion-pad® no longer suffices or doesn't show significant effects within a half hour frame, other therapies should be additionally undergone.

In any case, the bion-pads® (and all other bion-products) order and regulate the cell metabolism fundamentally. This can be proven beyond doubt by the scientifically recognized measurement methods of Prof. A. Popp.

The bion-pad® (the bion compress) fulfills the requirements demanded above:

- Harmful information has been removed from the quartz and is no longer absorbed.
- The cosmic information patterns of the entire biological spectrum are stored within.
- All stored information (= directing energy) is transmitted to the body cells in an amplified form.

Attention: While the bion-pad® can be combined with all common drugs, the dosage must frequently be reduced and readjusted in case of permanent medication (particularly in case of Diabetes). Please do consult your physician before!

In general, the bion-pad® should be worn near the afflicted body part night and day in case of illness. When the whole body is afflicted, it should also be worn in order to provide all body cells with a measure of defense against harmful radiation, thereby paving the way for the natural information. Any arbitrary placement will do, although one might prefer the liver region or the sternum (thymus gland) with the rib corner (solar plexus). Size 05 (12 x 24 cm) is required in both cases. In case of permanent medication, the author recommends permanently wearing a bion-pad® somewhere on the body in order to optimize its effect!

The bion-pad® is not sterile, and should not be placed on open wounds! Above a bandage, up to 3 cm away from the wound, it still possesses its full effectiveness, in light cases up to 10 cm. That's why it can help in cases of e.g. a fracture of the arm even when attached to the outside of the cast.

One can also boil it and heat it up to 180°C without affecting the information patterns whatsoever. The effect is maintained fully.

In order to decide whether the bion-pad® might be of help in your case, you only need to answer one of these

questions with “yes”: **Wound?, Pain?, Inflammation?, Swelling?** The diagnosis itself is ultimately only of secondary importance.

There are some restrictions when it comes to inflammations, for example when dealing with fungal eczema. As the fungus can frequently not be overcome by information energy alone, a combination should be used. In cases such as these, the bion-enhanced cream mentioned later might be able to offer relief.

But in cases of e.g. cough or bronchial asthma, certain parts of the respiratory tract are **inflamed**. In these cases, the bion-pad® works excellently.

Important: During so-called **chronic** illnesses, the afflicted tissue has changed at some point in time. This means that the cells particular to the area have been and are still being destroyed and replaced by other cells which serve as “fill” or “support” cells. These no longer have the original function, but can inflame themselves.

The diagnosis of chronic illnesses often ends in “osis”, e. g. **arthrosis** (joint disease). Here, the cartilage of a joint has been destroyed and replaced by bone cells and lime. (Many people suffer from this).

But if the diagnosis is **arthritis**, a joint disease is meant as well, but one that is painful and inflamed even without movement of the respective joint.

We can simply state: In case of an **...osis**, we're dealing with a “smoldering” disease progressing more or less

quickly. In case of an **...itis**, we're witnessing an acute episode of an inflammation, including heat, swelling and pain. A rapid rearrangement of the cells is then imminent unless the episode is immediately halted.

In case of, for example, a **gonarthrosis** – a change in cartilage and capsule tissue of the knee – no pain will be felt when stationary. But when the afflicted person moves the knee and then experiences pain, it indicates the onset of another inflammation, i.e. a **gonarthritits**. From a certain degree of inflammation, inflamed cells will die, leaving only replacement cells which do not possess the same function. This changes the knee further and further (thick, unshapely, limited mobility). But nonetheless, a knee with arthrosis should be moved. But how intensive, how often, and for how long? Without movement, the process advances just as fast as when there's too much movement.

It is in this case that the **bion-pad®** works true miracles; it immediately stimulates the cell metabolism, easing all swelling, inflammation and pain. This leads to a recovery of the afflicted cells instead of a repeated demise. Thus, movement can be increased and performed more frequently.

If a chronic joint disease causes pain even when resting, it also indicates inflammation. In these cases, a **bion-pad®** should be worn around the clock. This can stop the inflammation, and therefore a stop to the changes of the tissue, all the while alleviating pain up to complete freedom from pain.

A silhouette of a person standing on a grassy hill, holding a bow and arrow, set against a bright sunset sky. The person is facing right, with their back to the camera. The sun is a large, bright orb on the right side of the frame, casting a warm glow. The sky is filled with soft, wispy clouds. The person's shadow is cast on the ground in front of them.

People living outside of civilization don't know osteoporosis - typical disease of modern society, caused by malnutrition plus less exercise.

This example of changes in knee tissue also serves as an example for most chronic and acute illnesses that go along with pain, swelling or heat.

**Osteoporosis** – a typical civilization disease caused by lack of exercise and malnutrition – starts off slowly, without pain or other indicators for years. At some point, the bone skins and muscle insertions start to ache; the bone, losing too much calcium when afflicted by osteoporosis, doesn't have nerves itself and thus cannot hurt. When the vertebral bodies collapse, eventually, the nerve roots cause an additional pressure pain. Further restrictions to mobility ensue, driving osteoporosis forward.

All of us – doctors and patients – have been taught to consume calcium, vitamin D and certain hormones to counteract this. But the question what would make the bone incorporate the calcium remains problematic; malnutrition doesn't necessarily entail a lack of calcium or vitamin D, and neither of hormones, but one of biological nutrition and a healthy amount of exercise!

People leaving outside of civilization don't know osteoporosis, and neither do wildly living vertebrates, including our nearest relatives, chimpanzees and gorillas. Instinct is serving them much better than reason does us. When exposed to toxic food or malnutrition, they make use of zeolite, see further below under “zeolite”. It's impossible to tell if the zeolite would also help when exercise is lacking, as all wild animals tend to

move a lot. When it comes to humans, there are no refined studies.

We can use bion-pads® very well against pain and inflammation. They also serve as a motor for an enhanced cell metabolism. But it is only the therapy including zeolite and exercise that can cure osteoporosis; further vertebral fracturing can be prevented.

Much more could be written about arthrosis and osteoporosis, but this would exceed the goals of this book. It's the understanding of the fundamentals of therapy through subtle energies = directing energies = information = information patterns that enables the decisive new approach. Arthrosis and osteoporosis are merely two examples.

Wounds, pain, inflammation and swelling affect organs, i.e. matter. But remember: parallel and offset to matter energy, there vibrates vacuum energy. What's within the domain of the vacuum? Can we treat there as well?

The psycho-mental and vegetative systems are based mostly in vacuum oscillations (vacuum = non-matter); In other words: Spirituality, sensations, emotions, sleep and so on are based there.

As the bion-pad® conveys the respective information patterns for matter, it inevitably does the same for non-matter, i.e. the vacuum. But the bion-pad® aids most in case of sleep disorders caused by strong mental or

physical strain or anger. As all these disorders stem from the brain, they ultimately do have their cause in matter, although differently than wounds, pain, inflammation and swelling. Furthermore, light depression (= despondency) can be successfully treated with bion-pads® (place the largest one under your pillow at night). However, severe depression as well as mental disorders, addiction and others are not treatable, for reasons too extensive to mention here. Still – as in all cases of disruption of directing energies – the aim is to provide the best possible **basis** for any kind of therapy. Which is why the author recommends wearing a bion-pad® around the clock in general, somewhere on the body. In case of mental disorders or addiction, a small bion-pad® is sufficient.

### IV.1 bion-tec® bandage (knee bandage)

If the bion-pad® is shaped into a half-tube or -tunnel, its power increases for reasons unknown. Its effects are greater when wrapped around a knee than on a flat area, for example. The same holds true if several bion-pads® are arranged in a half-circle (with gaps). In this way, one can construct a knee bandage into which for example 1 ½ bion-pads® of size 03 have been sewn. Half a bion-pad® is therefore situated above the inner and outer lateral ligament of the knee, one 4<sup>th</sup> on each side of the patellar tendon. The effect is excellent in case of knee injuries, arthrosis, arthritis, swelling, sport injuries, etc.

Image 10:  
bandage

Cell phones, PCs, screens, high voltage cables, power inverters of solar panels (and many more) are also prime examples of harmful information sources. We all like to make calls, but please without harmful radiation

### IV.2 The answer to electric smog

Harmful radiation from radio installations has already been noted under the topic of bion-pads® drink and eat. Cell phones, PCs, screens, high voltage cables, power inverters of solar panels (and many more) are also prime examples of harmful information sources. We all like to make calls, but please without harmful radiation (= harmful information = harmful linear scalar waves)!

There must exist about 20.000 citizen's initiatives against “electric smog” in Germany today. They fight against radio installations in and in the vicinity of residential areas. All of a sudden, many people can no longer sleep soundly, others experience headaches previously unknown. In the proximity of radio emitters, heart attacks and cancer occur much more frequently. Doctors notice hemogram changes, hormonal changes and more. There are genetic alterations – as is the case with animals – more frequent brain defects (dementia, Alzheimer's disease) in younger years, infections and obscure variations of general indisposition that are hard to classify. Hundreds of studies do speak volumes.

But up until today, there exist legal limits in this regard. This means a higher radiation, strong electromagnetic waves and with them harmful scalar wave contents which are disturbing people unseen.

One could of course decrease those limits to a thousandth, as is the case in Russia for example, or even

a millionth, as in Australia. This might result in fewer illnesses.

What were those responsible thinking? Everybody's being irradiated without even a single preliminary examination. And then, depending on technical capability, "limits" are arbitrarily set.

What measurements led to those limits? It's like this: Electromagnetic waves generate heat when colliding with body cells. One only needs to determine at which magnitude the heating no longer occurs. For safety reasons, the arrived value is further reduced slightly, and one can feel entirely satisfied.

This is the political response to the still respected orthodox opinion. The research of the author indicate something else, however: The actual harmful energy waves, that is the linear, "monopolar" scalar waves, can originate from any electromagnetic frequency. In case of radio emitters and cell phones, they account for 20% of the radiation output. They are not harmful due to "heat impulses", but their disharmony with the cosmic scalar waves. Only experimentally verifiable facts are pursued at IBIT.

By the way: The author's experiments suggest the existence of another type of cosmic wave, although so far without any usable results. It all becomes even more interesting!

Put differently once again – because of the explosiveness: The measurements of orthodox physics and biology have no relation to one another. And they cannot, for the **effects of electromagnetic waves** are being examined, not, as you've now been reading repeatedly, the **effects of artificial scalar waves**. For all life, these form information patterns that do not occur naturally within the cosmos. Already you have noticed: Health is a function of cosmic information waves = cosmic information patterns = cosmic subtle energy = cosmic directing energy. Illness, however, revolves around artificial information waves = artificial information patterns = artificial subtle energy = artificial misdirecting energy. There also exists harmful information from the ground, though. But it can only have an effect where intersection points amplify the harmful radiation enough to overcome the positive cosmic radiation. In those cases, we require for example the bion-pads® described below in order to erase this radiation.

The artificial misdirection is not caused by the electromagnetic waves themselves – no matter the legal limits – but by their fundamental byproduct, scalar waves = misdirecting waves. This is not only the case with radio emitters and cell phones, but also all devices and installations powered by electricity: power appliances, power lines, electric railroads, power inverters from solar panels and many more.

Finally, millions of people -- and soon all people (and ultimately all life) – can heave a sigh, as consequences

will have to follow from what comes now. So far, the existence of scalar waves (= Tesla waves; Tesla was the first to describe these harmful waves, which can be beneficial under certain circumstances, a century ago), which always occur in tandem with electromagnetic waves, has been denied. Scientists reporting the existence of such energies were marginalized as charlatans.

The earlier mentioned Prof. Dr. Ing. Konstantin Meyl has now (2015) been researching for 35 years and has developed groundbreaking techniques. As recently as 10/16/2009, 16 scientists have validated his work in the renowned magazine “Science”.

This has to bring about a breakthrough in the consideration of legal limits. The actual harmful misdirecting energies absolutely have to be erased!

Ever since 2 decades ago (as of 2015), the research of the author revolved around the problem of misdirecting energies, i.e. misinformation. Once again: The artificially generated scalar waves display similarities to the cosmic scalar waves, but do not “resonate” (= “consonance”) with the body cells.

As already described for bion-pads® eat & drink, the author made great efforts to replace some of the information patterns of bion-pads® with specific information to eliminate harmful radiation. This led to the development of the **bion-pad® e-smog**. It is based on the therapeutically utilized bion-pads® already

described, the patent for which was granted in 2009 by the European Patent Office. (Naturally, the most likely globally unique information technique is not disclosed).

Through their branching special information, they work reliably against harmful radiation (scalar waves) from radio emitters, mobile phones, earth rays (also scalar waves with a dominant harmful radiation content), high voltage power lines, solar panels, microwave ovens and many more.

Let's take the statement from an experienced pediatrician specialized in natural therapies for example: "Nowadays, all infants are coughing, and none of them sleep soundly." The bion-pad® e-smog can remedy both within the first night, already.

One only needs to wear a small bion-pad® e-smog somewhere on the body (shirt- or blouse pockets, socks, bracelets, Velcro fasteners of diapers or rompers in case of babies, under the sheets at night, preferably in the chest area). It should not be more than 2-3 cm apart from the body. Material between the body and bion-pad® is irrelevant, as cosmic scalar waves, being standing waves, know no barriers. In any case, the bion-pad® e-smog is much more powerful than all known "radiators". **The bion-pad® e-smog should be worn night and day by all of Earth's inhabitants!** The same should apply for one's dear pets.

Image 12:  
bion-pad e-smog

Since 2009, we have been performing blood tests at the “Institute for Bioenergetic and Informational Therapy Research” (IBIT GmbH, led by Hegall Vollert) in cooperation with Dr. rer. nat. Ursula Schornstein, an expert on dark-field microscopy. The red blood cells are a delicate indicator of harmful information. They immediately react by rouleaux formation when making a call with a wireless or cell phone; this means they form strands and branches. As the red blood cells transport oxygen, even the layman will understand how the diminishment of their exposed area reduces their ability to carry oxygen. (See images and full report at [www.ibit-research.de](http://www.ibit-research.de)).

We all want to make mobile calls. Fortunately, we can protect ourselves within seconds with a bion-pad® e-smog worn anywhere on the body. The blood will then exhibit even better properties than before the call. If a bion-pad® e-smog is worn during a call, the hemogram remains stable. When not using protection against harmful waves, the disturbance tends to linger on for about half an hour after a 6-minute call.

Orthodox medical practitioners have doubts about the harmfulness of the red blood vessels' rouleaux formations; they would emerge after eating and endure for hours. That is both true and untrue. True because we're malnourished, degrading most of our **foodstuffs** by heating.

However, one can consume as raw fruit and vegetables as one wants without ever provoking the emergence of a single rouleaux formation. The red blood cells, already hard pressed to pass through the capillaries, have a much harder time when arranged into a rouleaux formation and can carry fewer oxygen to the cells to boot.

Attention!

- Rouleaux formation caused by heating of food, clear hemogram when consuming raw fruit & vegetables
- Reduction or complete obliteration of vital ingredients in food through heating, biochemically provable beyond a doubt
- Animal proteins clog up the matrix (intercellular tissue responsible for the disposal of waste products from and management of metabolic products in the cells)

Still, hospitalized patients are given this kind of nutrition, which – as we now know – for the most part **doesn't harmonize with the cosmic information!** Spoiled foodstuffs, also causing rouleaux formations of the red blood cells! Why? Because they emit scalar energy waves. By now, you know these from mobile phones and radio emitters, with their linear scalar waves, incompatible with the logarithmic scalar waves of the cosmos.

New experiments offer a glimpse of the high potency of bion-e-smog information. Miniscule amounts of bion-tec<sup>®</sup> informed quartz were poured into molds for placement into prosthetic teeth by a dental laboratory in Fulda (Germany). In our studies, the complete effect against electric smog from mobile phones clearly showed through dark-field microscopy. So, the fitting of a prosthetic tooth is sufficient. That the effect is so reliable despite the low energy clearly points towards cosmic, standing, bipolar wave patterns, which remain present regardless of conversion. This can be equaled to infinite velocity. Therefore, the amount of the bion-tec<sup>®</sup> informed quartz only plays a minor role up to a certain degree.

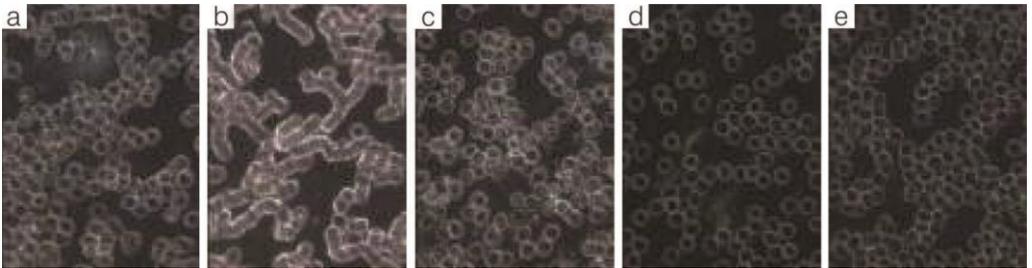

Image 13: a) Initial picture – after having been in a geopathogenic area for about 30 minutes. Flow properties and distribution of thrombocytes as observed through a dark field microscope appear normal.  
b) Massive Rouleau formation after 6 minutes of cell phone use. The thrombocytes become stuck together almost literally. This condition usually endures somewhere between minutes and hours.  
c) A small e-smog-pad is placed in the shirt pocket. Blood

extraction occurs 10 seconds later. Thrombocyte distribution returns to the state depicted in Fig. a (initial state, now even with slightly improved flow properties.

d) After having carried the e-smog-pad in the pocket for 5 minutes, the thrombocytes flow properties remain optimal – despite no change of location within the geopathological area.

e) Repeated cell phone call for 12 minutes while wearing the e-smog-pad: Less viscous blood than in initial state. The detrimental effects of the geopathological area and cell phone radiation have been neutralized.

### FURTHER EXAMPLES FOR HARMFUL INFORMATION

#### MICRO WAVE OVENS

Another word regarding micro wave ovens, which many people use voluntarily. Their manufacturers are aware of the scalar waves described in this book, which always appear in the microwave range and not as harmful information patterns. But being a reader of this treatise you know by now.

But it gets worse: The harmful information generated by microwaves from the microwave oven persists in the food for hours after heating, i.e. the time frame in which the food is being digested. The harmful misdirecting energy remaining after several hours keeps the food in the electric – i.e. indigestible – orientation and more.

Note: Electric and magnetic alignment are terms from the domain of measurement, indirectly indicating positive and negative scalar waves = harmful waves.

Both the electric and magnetic alignment are being determined. Both can be positively or negatively charged. Digestibility of foodstuffs is only given when the magnetic alignment is positive while the electric alignment remains neutral. (That does, however, not have to be understood, as it would require a lot of prior knowledge).

Whoever doesn't immediately dispose of his microwave oven can help himself to some extent by placing a bion-pad® e-smog somewhere on the microwave oven and placing food on top a bion-pad® eat or drink for at least one minute before consumption.

### HARMFUL RADIATION AND ENERGY SAVING LIGHT BULBS

Since 2012, the weakest light bulbs may no longer be sold. This was once again decided by governments in partnership with big industry, of course subsequent to “careful” vetting by helpful scientists. The new so-called energy saving light bulbs replaced the old ones via decree. For any scientific expert opinion, an opposing expert opinion can be published. Ultimately, those in power get to decide.

1. Small amounts of mercury are contained within the energy saving light bulbs. Well, you can tell what's **bound to happen**. Those small amounts of mercury constantly emit harmful radiation, right within the biological direction spectrum that is the very topic of this treatise. “Energy saving”? No way! Their production requires more energy, and their alleged life span

is far from being guaranteed when the bulbs are switched on and off as frequently as conventional light bulbs; disposal will be excessively expensive due to the mercury contents and will require significant amounts of energy. As the demand for light only makes up a small part of the general energy demand, the energy savings of this technology are farcical – provided any savings remain at all.

2. Our eyes are adapted to the solar spectrum. Sunlight consists of various colors which we can see in rainbows (spectral colors). While incapable of reproducing them completely, conventional light bulbs got pretty close.
3. The energy saving bulbs display a different spectrum altogether. Blue, which contains subtly energetic harmful radiation, dominates. In this way, misdirecting energies appear; it's only a question of time until somebody responds with sleep disorders or headaches. This harmful radiation coalesces with that from the mercury. As we already have to tolerate more than enough misinformation – as covered extensively in this treatise – those responsible should never have allowed this development. But independent scientists remain unheard.

In a few years, as more people become ill, more energy will probably be required, and saving is going to turn into wasting. And as many other factors can cause

disease, those responsible will surely argue that nothing can be proven, as usual, irrespective of the amount of scientific evidence provided by concerned researchers and other individuals devoting themselves to this topic, in this case for example the “Citizen's Wave Switzerland”, [www.buergerwelle-schweiz.org](http://www.buergerwelle-schweiz.org) or [www.lichtbiologie.de](http://www.lichtbiologie.de) or [www.international-light-association.org](http://www.international-light-association.org) or [www.mediziner-warnen-vor-mobilfunk.de](http://www.mediziner-warnen-vor-mobilfunk.de), to name only a few.

We are living in a miraculous and also dreadful age, in which mercantile activists, together with the body politic, have solidified their reign. If all of this is “progress”, then why are rates of illness rising globally instead of declining?

German health insurance funds extrapolated the expected cancer rate in the year 2030 from the date of 2011, for example. Unless things change, twice as many people will suffer from cancer in 2030. The artificially generated scalar waves play a major role in this, it appears.

Finally an example concerning mercury, which is used for amalgam fillings, as is well known. On superficial examination, there's only tiny amounts of mercury. To some extent, they will be dissolved, get into the blood stream, partially be excreted and partially accumulated in bone tissue. Some amount remains in the filling for years, the rest migrates to the jawbones.

What will you say now? Of course, I know: Not the amount of mercury is decisive, but its harmful information contents. These disturb the body around the clock, for years. Is such a “treatment” truly worthy of being called treatment when evaluated over the long term, or does it qualify as malicious injury?

This treatise taught you fundamental insights. Take responsibility for your life and your health. Support your fellow human beings walking other paths than those of (self-) destruction for whatever perceived profits.

### V. CONTINUED DEVELOPMENT

This treatise represents a brief overview of a medicine that has actually existed for millennia in all cultures. We have made giant leaps towards better measurements and thus targeted development and verification, yet are still only on the verge of a decisive new age of medicine for mankind – despite a quantum leap concerning the development of products with excellent, predictable effects and no side effects.

A valuable discipline of science distinguishes itself by progress. The invitational nature of this newly discovered medical matter might intrigue a researcher for the rest of his days. In this way, even **more effective products against wounds, inflammation, swelling and pain** have been discovered.

Our information technology refines these products considerably. The bion-energy is not only supported through combination with known active agents, but also raises their effectivity. Healing processes are accelerated correspondingly.

### V.1 The bion-tunnel

For one, there's the **bion-tunnel**, an approximately 36 cm long and 12 cm wide half-tube. It serves as a means of therapy for inflammation of the lower legs, feet and knees (thrombophlebitis = inflamed varicose veins, hardly or not at all treatable open lower legs, capillary occlusion as a consequence to smoking or enduring Diabetes, lymphostasis). Of course the pain is considerably relieved or even eliminated fully.

The bion-tunnel should be applied sitting or lying. When moving about, the bion-pad® should be used. Using both at once does not increase the effect. Neither does placing two or more bion-pads® on top of one another.

The bion-tunnel can be considered a quantum leap in the treatment of complicated circulatory disorders, inflammation of the veins, fever blisters (Herpes Simplex), small itching areas of skin (Neurodermatitis), and all types of inflammations in the lower leg region.

Image 14:  
bion-tunnel

### V.2 The acupuncture pen

Since centuries, a method of therapy involving subtle energies has been in use, becoming popular also in Europe and the U.S. (the bastions of western orthodox medicine) within the last century. Its origins lie in East Asia. I'm speaking about **acupuncture**. The classical method employs fine needles.

According to the far-eastern perspective, all illness is caused by an imbalance between Yin – the feminine – and Yang – the masculine primal force. The whole of the body is permeated by “strands” of concentrated energy flows, effectively influenced from certain points, the so-called acupuncture points.

Unfortunately, many children as well as adults avoid the needles. In addition, classical acupuncture works with the body's own energy. It frequently requires many sessions to equalize Yin-Yang, and oftentimes, success simply remains absent.

Image 16:  
bion-acupuncture-accu

For the author, this was a provoking challenge. Firstly, the needles would have to go, and secondly – as now explained in detail in this treatise – we no longer have to wait for an equalization of energy. In order to provide diseased (disharmonic oscillating) cells with information patterns of subtle energy, it has to occur instantly, and amplified at that, as we now know. The acupuncture points provide us with ideal access. Bion-technology works with **standing waves**, existing in the vacuum and as matter, simultaneously. Therefore, an acupuncture point might as well be reached from outside of the body (above the skin).

These requirements could eventually be satisfied by the author. The result was the ingenious invention of the **bion-acupunct-accu**. Its diameter is approximately 3 cm and its length approximately 13 cm. At the top, there is a rounded metal pin which transmits the information. In comparison to classical acupuncture, it offers the following remarkable advantages:

- No more jabbing; perfect for children and frightful individuals.
- The acupuncture point no longer needs to be hit precisely; 3 cm offset from the acupuncture point are sufficient to yield the full effect.
- The Yin-Yang-equalization needs no longer be considered; it is attained with a fraction of a second.

- Anybody can perform therapy on himself at home (after professional instruction) – as frequently as desired.
- All the mentioned advantages guarantee the best therapeutic outcome.

Of course it – as the bion-pads® – transmits the entire biological information spectrum. All technical dimensions have been calculated according to the new physics (Global Scaling Theory) in order to attain the highest possible potency.

### V.3 The cream

The **cream** consists of vegetable oils mixed with biontec® informed quartz powder, aloe extracts, colloidal silver and more. It is meant for small areas of application, where bion-pads® would be complicated to attach.

It serves well in treating insect bites, subcutaneous inflammations of all kinds, superficial sport injuries and swelling. It shouldn't be missed in all travel- and sport bags.

By the way: The term “anti-aging” is used too carelessly. Nowadays, it mostly revolves around the skin surface, in any case about the skin of the face. Not even the use of chemicals and toxins (botulin) seems to be a hindrance on the way to “smooth skin” – eventually leading to even more wrinkles and skin defects through the harmful energies contained within the chemicals.

But the best possible skin care can only be provided by the respective biophysical information patterns. The

inventor also expects a positive long-term result in this regard.

### V.4 The zeolite

**Zeolite** has been somewhat forgotten and is being rediscovered in these parts. All peoples have known it ever since the dawn of time, and wild animals have also been using it when needed. Zeolite originated from tuff rocks (volcanic rocks) millions of years old. It's a mixture of many minerals, quartz being the majority at a content of over 60% (in case of zeolite of high quality). Quartz is the principal regulator of all electrolytes. Without quartz, no higher life would be possible.

Not only can quartz create new elements from two different elements, but it can also merge with another element to form a new one. A known example is an experiment with chickens. One enriches their feed with half the amount of calcium required for creating the egg shells. The eggs emerge without shells. The experiment is repeated, but with the addition of sufficiently many **quartz** grains, when suddenly, eggs of normal lime content are being laid!

But zeolite can do much more. Enough material for an entirely different topic – as is nutrition – it will not be discussed further here.

bion-tec® now presents a world debut: With its information method, the possible harmful radiation contents of the zeolite are being deleted while the quartz is provided with the biological information patterns – just like the quartz in the bion-pads®. As the zeolite lines the insides of the intestines after ingestion,

its quartz contents now work from the inside. This increases its biological value. Medically, only the bone disease described above – osteoporosis (calcium deficiency in bones), the metabolic disorder mostly driven by civilization – shall be mentioned once again. Its main cause is the combination of malnutrition and a lack of exercise.

Bone forms when, apart from being supported by sufficient electrolytes, it experiences enough pressure and strain (musculature) and degrades when both are lacking. If these are indeed the prerequisites, the question one has to ask is: Why administer calcium for therapy when there is no biological reason for the bone to incorporate that calcium?

With zeolite, one finds other prerequisites to compensate at least a little for malnutrition. Intensive exercise then plays its part, too, especially if the zeolite contains the complete information pattern. It can alleviate pain from movement, making exercise easier and therefore potentially more intensive.

The author researched this topic extensively in his early years and published the bestselling book “Complete Cross-Country-Skiing Method” in 1990.

### V.5 The enhancement of food and drinks

What else can be done prophylactically in order to prevent the emergence of disease?

Toxins were mentioned earlier. There are toxins that kill immediately. But there's also toxins whose enduring ingestion reduces one's lifespan, such as tobacco, alcohol and other addictive substances. But what is seldom considered and mostly trivialized, probably because (almost) everyone is taking part in it, is malnutrition.

Even those practicing healthy, biological nutrition with the utmost care still face, at the time of this writing (2015), the problem of misinformed foodstuffs. Even if these have been produced strictly by biological means, they are still polluted by the harmful radiation from radio and radar installations. This harmful information is being stored in the liquid contents of the plants!

Why is this harmful information stored? This you know by now, as you have read about the capabilities of water to store information further above. And all life forms including plants mainly consist of water.

In addition, there is information from the chemicals in the air and ground water, posing an incalculable problem for the foodstuffs and thus us consumers. Last but not least, there is incalculable harmful information coming from the ground. We have to erase these.

What to do? This new challenge led to the necessity to attune the information technology to this harmful energy. The by now extensively described bion-pads<sup>®</sup> and their information patterns served as an initial basis. But as these pads are informationally “saturated”, certain parts had to be left out to make room for the new information patterns. (This unintentionally led to a technically improved information know-how).

Through the partial information exchange in the bion-pads<sup>®</sup>, some of their effect on wounds, pain, etc. is lost. But in return, harmful radiation is erased.

We can observe significant effects on **drinking water** and **foodstuffs** within seconds after placing them on such a bion-pad<sup>®</sup>:

- Free radicals are reduced considerably
- (Negative) electric orientation is neutralized
- The important magnetic alignment is fully achieved
- Levorotatory lactic acid (mostly indigestible) turn dextrorotatory.
- The clumps of red blood cells visible through dark field microscopy are being dissolved within seconds or do not form at all if a bion-pad<sup>®</sup> e-smog is worn in addition.

Two practical sizes are available: Round, diameter approximately 9 cm for jars, cups, i.e. drinks **bion-pad® drink** and approximately 20 cm for dishes, plates, pans, pots, etc. **bion-pad® eat**. This special information too cannot be erased from the bion-pads® drink and eat.

Image 18:  
bion-pad® eat and drink

### V.6 bion-subitum = energized water

According to measurements by Prof. Dr. Ing. Martin Günter, the bion-subitum is several times more potent than for example the water of Lourdes. For the first time, the complete blocking of any additional information of water is achieved; the harmful information present before has been “neutralized”.

Examples for application:

- a) One splash from a spray bottle is sufficient to optimize a whole plate full of food, just like the bion-pads<sup>®</sup> eat and drink can.
- b) One milliliter of bion-subitum per bottle of any beverage is sufficient to positively alter its taste considerably, in addition to the effect of a)
- c) As there exists a special information concerning e-smog, several hours of protection against e-smog from artificially generated scalar waves are provided.
- d) The range of application and enhancement is immeasurably vast within the entire spectrum of food and drinks. Without anterior decontamination by bion-tec<sup>®</sup>-products, one should best not consume foodstuffs – not even those biologically produced.

### V.7 The bion-ovo

Synthetic outer shell, oval, 44x28 cm, about 3,2-3,5 kg, flattened front. Most potent product yet, contains various energy arbitrators and technical know-how for high performance. Additionally incorporates all properties listed of the bion-pads® and energized water. If placing two bion-ovo facing each other's flattened fronts at a distance of about 90cm, their potency is further increased. It makes no difference if a person is sitting right in the middle or anywhere in between.

Image 20:  
bion-ovo

### V.8 More powerful bion-accumulator

If more energy is required locally, a **bion-accumulator**, an almost a meter long tube incorporating a powerful information pattern outlet, is employed. Similar to conventional Reich accumulators, it features optimized dimensions and a completely different know-how as well as special information patterns. Of course, it lacks the misinformation contents described by Reich (named differently by him).

This bion-accumulator is reserved for therapeutic practices.

Image 21:  
bion-accumulator

### VI. MEDICAL FIELD STUDY, BIOPHYSICAL REPORT AND FUTURISTIC PERSPECTIVES

#### FOR COMPREHENSION OF THE NEW ENERGY MEDICINE

The following is known:

1. The cell metabolism has to proceed **orderly** (biochemically speaking: cascaded), whereby a large energy-providing mass (food) is being **directed** by a miniscule, energetically efficient mass (hormones).
2. This miniscule energetic mass (hormones) is itself controlled by an ultra-weak, but nowadays measurable energy. This energy consists of spatially ordered patterns of infinite variance = **information** (Hegall Vollert).
3. Each cell acts as a dipole; it is emitter and receiver simultaneously. The communication of cells amongst themselves, for example from the head to the foot, is dependent on time. It's completely different in case of the **ultra-weak = subtle energies**. They are **standing waves** not subject to any kind of delay within the entire cosmos.
4. The new physics = **Global Scaling Theorie** (Hartmut Müller) defines the standing cosmic waves as “eigenfrequencies of standing vacuum compression waves“ within a “logarithmically-hyperbolic scale-invariant spectrum“ or virtually

infinite fractals (experimentally verified since 1986, kept secret until 1996).

5. Certain **fractals** of the **cosmic energy = vacuum compression energy** or **proton resonance energy** and the terrestrial magnetic energy have been known for decades under various names, among them bion energy. Bion energy can be regarded as a specific spectrum of the cosmic energy and its transformed energy forms (e.g. Earth's magnetism). The “ideas” or “play” of the energies initially create self-sufficient cells with their cell organelles from four main elements, namely **oxygen, hydrogen, nitrogen** and **carbon**, among further “auxiliary atoms”. But they can only survive = function as long as they remain coupled to the specific standing wave fractals of the cosmic energy. Even small deviations – when concerning for example a multicellular organism such as a human or animal – result in indisposition and illness up to death.

### NEW DEFINITIONS FOR LIFE, DISEASE AND INDISPOSITION

From the information mentioned above one derives completely decisive therapeutic approaches to disease – decisive because the therapeutic approach changes from chemical and energetic manipulation to a **directing, cell informing and resonating energy medicine**. From this branch of research, both “life” as well as “disease” can be newly defined:

1. All **life** is the resonant expression of biophysical information patterns of logarithmically scale-invariant fractals of vacuum compression energy or proton resonance energy (Hegall Vollert).
2. All **disease** or indisposition is the dissonant response to information from certain biophysical, logarithmically scale-invariant fractals of vacuum compression energy or proton resonance energy (Hegall Vollert).

(The layman doesn't need to be familiar with those scientific theorems, of course).

### INTERMEDIARY – FOR ENHANCED COMPREHENSION

The whole cosmos consists of **space time**. The infinite different standing waves have eigenfrequencies and harmonize with themselves in unity. For better comprehension let us call them **one** spatial wave. It knows neither past nor future (just like a circle). Therefore, there is neither an end nor a beginning.

If one places marks somewhere along the wave and the wave manifests a billion times within the cosmos at the same time, those marks can be found at every respective location of the wave. If an arbitrary mark marks the Earth, all marks encompassed within it are either identical or similar. In effect, this means that billions of civilizations, animal species, plant species etc. are infinitely repeated identically or similarly.

Let's take another look at image 6 (page 24). The fields above represent the matter wave. If we move from 81 (about the body height of a human) towards 82, for example, the location changes. This also changes the dimensions of all systems with humans as well as humans themselves. At 82, where the vacuum is reached, the local dimensions of the cell organelles, cells, cell systems and organs have drifted apart considerably. Eventually, too many of them have distanced themselves too far from “life” and go into harmony with other local oscillation systems.

A location shift of such magnitude is termed as “death” by humans. But as we're speaking of shifts in location only, harmonic systems emerge once again. All matter “dies” and “emerges” – from the origin up to galaxies.

### FROM PRACTICE

The bion-pad® was developed and informed according to the latest insights into cell functions and the high significance of their cosmos-energetic coupling and their communications amongst themselves (Hegall Vollert). In spring of 2002, 350 clients (randomly selected from the client files) were sent a questionnaire about the effectiveness of bion-pads® by the bion-tec® company. From 204 responses (58%), 398 diagnoses and symptom descriptions could be yielded. From the categories: Healing (as far as possible or even considerably quicker), significant improvement, improvement, no effect, the first three (positive) made up 95,5%.

Positive treatment results were achieved in case of: general pain, inflammation, swelling (wounds, contusions, hematoma, burns), post-op conditions (chronic, acute), HWS-syndrome, Migraine cervicale, shoulder-arm-syndrome, tennis elbow, BWS-syndrome, lumbago, sciatica, spondylolisthesis, herniated discs (post-op condition), arthrosis, arthritis, rheumatic disorders, (osteo)-tendinosis, achillodynia, pulled muscles, muscle tenseness in general, gingivitis, tooth ache, migraine, cephalgia in general, depression, sleep disorders, cardiac arrhythmia and especially tachycardia, abdominal symptoms in general, flu-like symptoms, bronchitis, chronic cough, bronchial asthma, menstrual pain, burns, herpes simplex, insect bites, chronically infectious tear ducts, eczema (general, allergic), aphthae, psoriasis, glaucoma, otitis in general, acute hearing loss, tinnitus, trigeminal neuralgia, chronic sinusitis maxillary, post fracture conditions, thrombophlebitis, lymphedema, cramps in general, herpes zoster, cancer pain (post-op condition).

Not only was the high effectiveness noticeable, but also the rapid alleviation or even elimination of pain, reduction of swelling, the clearly missing ulceration of various wounds, later the smooth scarring, the extraordinarily beneficial effects on the pulmonary system (lungs, bronchial tubes), both acute and chronic or chronically allergic.

In general, the bion-pad® can successfully be employed if one of the following questions can be answered by

**yes: Pain?, Inflammation?, Wound?, Swelling?, Pressure?, Local heat?, Burning?, Coughing?, Bronchial asthma?, Sleep disorders?** - to only name the most important ones.

**From all this evidence, we can deduce the credible conclusions of a remarkably effective therapy.** These observations also highly relevant for **surgery** are very intriguing even without double-blind studies. The considerably accelerated healing, along with the lack of an excess of fibrotic (scar-) tissue make it highly desirable for plastic surgery. Notice: For ethical reasons, double-blind studies can frequently not be performed.

Measurements by Prof. Dr. h.c. Dr. Ing. Martin Günter have shown several measurands important to modern medicine, which are presupposed for rapid and unhampered healing of wounds, such as pH-value optimization, strong reduction of the redox potential (free radicals), magnetic alignment of the cell metabolism, dextrorotation of levorotatory lactic acids, significant increase in the eye-flickering-merging-frequency, and more.

### VII. PERSPECTIVES

The highest goal of therapeutic strife is healing. But the healing **duration** is also of immense importance. The optimal shortening of the suffering or healing interval is a challenge to the art of therapy. All measures are oriented towards it.

With the aid of bion-pads<sup>®</sup>, a bone fracture can recover about a third faster, according to experience. This means nothing less than shifting the future envisioned by man (on a standing wave) closer towards the present.

That is how we imagine it. But as outlined in the chapter “Intermediary – for enhanced comprehension“, time cannot be shifted, only location (the dimensions of matter) on it. If the cells afflicted by the fracture heal, their dimensions change constantly. It then becomes vital to measure these dimensions at a location closer to healing.

As the entire cosmic system is based on standing waves, making both the future as well as the past “graspable” from the present, it must be possible – at least theoretically – to shift healing further or even entirely into the present. In other words: The mending of a bone could potentially occur within an hour, for example.

It might sound utopian, or even crazy; but modern experimental physics undeniably calls for this course of medical research, which is already ongoing at several

(non-European) top universities. The author takes part too, through private research.

To all pet holders: You now understand the basics of the cell metabolism. What applies to a human cell also applies to an animal cell. Therefore, all animals can be treated in the same way as humans can. The cosmic information patterns do not know any difference in this regard.

### VIII. REPETITION OF THIS TREATISE

- Scalar wave energy = vacuum compression energy = proton resonance energy is the foundation of everything in the universe
- All manifestations of energy, such as electromagnetism, photons, kinetic energy (movement), heat, tachyons, etc. are transformations of scalar wave energy
- Scalar waves = space waves have logarithmic = natural logarithmic relations amongst themselves and are therefore similar. They are defined as bipolar longitudinal standing waves
- Because of the logarithmic relations amongst themselves, scalar waves oscillate harmonically = synchronously = resonant. Due to their harmony = synchronism = resonance, they form and maintain matter at their stronger intersection points. (Matter – as strange as it may sound – consists of 99.999% vacuum = non-matter)
- Yin-Yang, chi, bions, life energy et al describe nothing else than fractals (sections) of space energy
- In the vacuum, space energy appears only subtly (very weakly), yet immeasurably because of its unfathomably vast expansion. Through their

standing longitudinal wave patterns, all matter (and also humans) are in resonance with all scalar waves of all magnitudes

- Information consists of scalar waves of infinitely many patterns in a three-dimensional (spatial), natural logarithmic arrangement. It is the natural oscillation of the cosmos and is in resonance with both potentially in vacuum and in fact in any matter with corresponding dimension. So they are an energetic, massless, spatially structured arrangement of scalar waves which oscillates with every equal structured matter in resonance. Thus, the term information is only permitted in connection with matter. (Hegall Vollert)
- Artificially generated scalar waves contain incompatible and thus harmful information to all living structures. They are not compatible to their cosmic counterparts because 1. they are subdivided linearly (not naturally logarithmic) and 2. because they are monopolar scalar waves. Monopolar means originating from a (synthetic) source and extending into infinity, while cosmic scalar waves are standing between two poles = dipolar in space. For both reasons, artificially generated scalar waves cannot form compatible information. They therefore form chaotic and thus harmful information or simply pass-through energy (as for example the dark-field microscopy hemograms reactively show)

- Conclusion: We live and maintain our health not only through energy, but energy in nearly infinitely many (polymorphic) energy patterns = Information

### IX. WORLD FIRST

bion-tec® is the owner of an European patent that schedules to bring the already mentioned quartz - which is unquenchably informed – into microfibers or to spray onto other fibers or to coat any garment with it. Tests have shown that the coating can be made breathable or may be placed between two layers of garment. IBIT itself had tested and also had given away for testing.

So it would be useful to produce clothing, bed linen, mattress covers, seats for cars and aircrafts, insoles for shoes, sofas, carpets and many things more. First tests of such garment on sick people – like those examples shown with the bion-pads® – and on high performance athletes (starters in the Olympics, European championships) clearly showed the effect (Olympic Games and European Championships data).

For the first time a medical active system in garment has been produced which healing effect will stay 100% forever!

In December 2015 the first garment factory has started to deliver mattress covers, duvet and pillow covers. We think those products are a must for all people who suffer from allergies, circulatory disorders (especially of the legs like thrombophlebitis, restless legs, arthritis etc.).

And nearly all the notes you find in chapter X (and much more). While finishing this treatise big companies

started producing **mattresses, cloth** for seats and sofas and **carpets**.

Others started to rain their field and garden products with water which contains bion-tec informed quartz. First tests (since 3 years) have been showing clearly that the harvests in organic agriculture have been more profitable. If you mix bion-tec quartz into screed or **plaster** of houses or flats you will get an invigorating climate in the rooms and also you will be protected against earth rays and all artificially emitted harmful rays.

That might be the beginning of a new age in the garment industry.....!!!

In July 2016 we applied for a new patent. In breve: We fix an active substance (e.g. a homeopathic or isopathic) on a bion-pad and apply this one on a meridian or an acupoint. These substances are effective as well from outside as from inside because only the corresponding skalarwaves are acting which are standing waves not knowing any barrier.

Advantage: 1. the substances may be used as a singular dose for several days or even months. 2. The level of effect in the body remains the same all day and night because there is no metabolization. 3. The corresponding frequencies from the bion-pad have an intensifying effect.

We need the effective substances from other medicaments. Most of those have to be metabolized and from that only one metabolite is the needed substance which is working only via its skalarwaves. Instead of this it is much more useful to cure in the way written above.

### X. SOME CASE EXAMPLES

Note: “compress” designates a “bion-pad®”.

1. B.S., f., 57: After surgery (**carpal tunnel syndrome**), the compress helped considerably. I required no painkillers and the recovery went optimal.
2. M.G., f., 52: **Earaches** had vanished overnight, **pain from burns** after ½ hour and blisters did not form; No nightly irritation of the throat in case of **allergic bronchitis** when wearing the compress on the chest.
3. J.T., m., 42: **Arthrosis of right knee**, wearing the compress overnight, free from symptoms the next day in most instances.
4. I.A., f., 45: I had baffling success when treating **acute hearing loss**...treated for days with infusions to no avail. Then I remembered the compress. I put it on my ear and 45 minutes later already circulation was back to normal and I could once again hear clearly.
5. G. R., f., 42: My son frequently complains of **headaches** after school. When placing a bion-pad® on his forehead, he falls asleep briefly and is free from pain afterwards.

6. A.W.,f.,45: **Chronic capsule strain in the right shoulder with debilitated mobility.** Free from pain and mobility fully restored after using the compress day and night for about three weeks.
7. P.R., m., 50: **Herniated disc with pain radiating into the left lower leg.** Significant improvements after about ½ hour.
8. G. R., m., 75: **Sitting** (over longer periods) causes much fewer complications when wearing the bion compress on the lumbar region. Getting up is easier.
9. H. K., f., 79: Major improvements in case of **osteoporosis induced pain of the lumbar region**, significant increase in mobility, no additional therapy.
10. J: R:, m., 53: **Obesity** (about 160 kg at 1.75m): a) **Stretching of a sinew in the left lower arm, 33 years of pain**, have applied the compress for about 10 times over night, experienced significant alleviation of pain after the first night, already, after about six nights the pain was gone entirely. b) **Severe shoulder injury** after motorcycle accident, which mended badly due to maltreatment (according to three physicians), heavy pain for many years, night and day. As in a), all conventional methods of treatment including acupuncture failed! After undergoing the

treatment described in a), I am now almost free from pain. A true miracle, this compress!

11. D. K., f., 67: I use the compress as a **sleeping aid** under my pillow.
12. A. A., m., 64: The small compress provides relief against **herpes of the lips** within minutes: no more burning, no swelling, symptom-less crust formation without subsequent inflammation afterwards.
13. W. J., m., 45: The large compress immediately helped against **constipation induced stomach ache**. My neighbor's tennis elbow was cured after 14 days.
14. D. M-H., f., 65: Very good effect against **ailing varicose veins**, pain-free within 5 to 10 minutes.
15. R. D., f., 58: **Mastectomy on the right side and irradiation** 11 years ago. Heavy **lymphedema** in the right arm ever since, which could not be helped by any kind of treatment. Under the large bion compress, the lymph sac has receded completely overnight, so that I can once again wear short-sleeved clothing. When the need arises, 15 minutes of treatment suffice. Essentially, the arms has remained without swelling ever since.
16. J. B., m., 61: The ailments of a **sore throat** were gone after one night.

17. V. K., m., 40: Applied the large compress against the **allergic bronchial asthma** of our son (12 ½ years). → Relief within ½ hour → have not used asthma spray ever since.
18. H. C., f., 36: I experienced a considerable relief from my **menstrual pains**, which have persisted for years. My husband had success against **tinnitus**.
19. A. H., f., 45: **Sternum fracture** by car accident. The compress relieved me from much of my pain. Could breathe better immediately. The whole pressure was gone.
20. M. B., f., 71: **Arthrosis** of the knee – no longer require injections.
21. D. D., f., 79: **Herpes zoster** 7 years ago, recurring **severe pain** in the area one year ago. Injections and tablets brought no improvements. 90% improvement within 4 days. Application nightly. No ailments at all on some days.
22. A. K., m., 68: In short time, the compress healed by **allergic eczema**.
23. A. S., f., 38: **Pain, swelling, hematoma** in right leg, from the groin to the mid lower leg, unknown cause, various diagnoses: thrombosis, torn meniscus, irritation of the muscle insertion, torn muscle fiber. Alleviation of pain, reduction of swelling and inhibition of inflammation over

night! Cured after 4 days!

**Headaches** → Relief with 20 minutes. **Stomach aches** of our child → pain-free within 30 minutes. Morning cough of an **asthmatic child** → cough-free within 10 minutes.

24. N. N., f., ?: **Fresh surgery scars** (on stomach) heal very quickly, **swelling** has vanished entirely after applying compress overnight.
25. L. H., f., 81: **Sciatica and shoulder-arm-syndrome** for 10 years. Have been almost immobilized by pain since three years, all bones hurt despite intensive orthopedic care. Relief overnight. Walking, lying and sitting once again possible. All other complaints, **stomach aches** among others, remedied with the second compress. Ever since using the compress, I have not taken any more pharmaceutical drugs and not undergone further orthopedic therapy.
26. A. O., f., 63: **Trigeminal neuralgia** since 3 months, considerable relief after 10 minutes.
27. G. K., f., 72: **Joint pain** and others, **Sciatica**. The result is astonishing every single time. I can speak of a cure, entirely without pharmaceutical drugs. A since thank you.
28. B. B., f., 50: Noticeable relief within minutes against **hay fever** when placing the compress over the **swollen eyes**.

29. L. H., f., 53: No pain and swelling subsequent to a **dental jaw surgery**, only six hours with the compress!
30. In a holistically oriented dental clinic, more than 1000 cases in which the bion-pads® (bion-pad® tooth = special shape) were utilized in cases of **tooth ache, aphthae, gum ulceration, jaw surgery post-op conditions** and **conditions after too extraction** have been observed and documented. The reliable effect, lack of pain after surgery or extraction, significantly increased wound healing and smooth scar formation were all noticeable. Patient satisfaction and savings in pharmaceuticals were correspondingly positive, as was of course compliance.

Hegall Vollert

# START

## INTO A NEW ERA OF THERAPY

Dr. med. Hegall Vollert, born in 1941; experienced doctor of sports medicine, director of an own praxis for many years, has been working in research of subtle energetic medicine since 1994. He is the owner of several patents. In 1999 he established the bion-tec company.

In 1997 he got the breakthrough in medicine of the future by having developed a worldwide unique method of information as a base of the whole future therapy. In 2005 he was honoured with the title of a honorary professor of the Mexican Universidad del Golfo which is an elite university, one of the very few universities worldwide where they deal with bioenergetics physics. In 2004, Prof. Dr. Ing. Dr. mult. Martin Günter, a specialist in the field of metrology, could verify the extraordinary effect of Dr. Vollert's bion-tec products.

ISBN: 978-3-00-052203-1

It's your health, your life, your vitality. The one who takes the chance to understand and to learn about the fundamental will change his self-confidence in an indispensable and decisive way.

To understand the principle of all healing or therapy it is necessary to have knowledge about the highly interesting discoveries of the new direction of physics.

This book mainly is written for layman. But nearly all medical doctors and therapists will learn about crucial new things so that they will have to change the therapeutic perspective for the benefit of their patients.

It is still the beginning of the new era therapy – but there are already striking successes. But after having understood what is written in this book, nobody will call such successes of healing striking or unexpected because they are the logical consequence of what the new bioenergetic physics teaches us. There are listed many examples of medical cases.

This book will decisively increase the self-confidence and self-determination of all laymen.
